

Conditions Deck - strategic, high-agency, morally anchored young builder who is intellectually restless and not yet fully activated.

[Click here for Google Doc \(Click File > Make a Copy\)](#)

Example Condition Deck For KJ's Audience: [\[CLICK HERE\]](#)

Miro Version Template: [\[CLICK HERE\]](#)

If you speak to:

"The 3PM version of him who has 17 tabs open and feels restless but capable"

You win.

Because that version is where his pain lives.

SECTION 1 | MACRO AIM

Audience/Niche (Who):

- *How can you easily describe the people you're targeting?*

Young, system-oriented builders who are trying to earn leverage in the AI era without becoming shallow, corrupt, or intellectually lazy.

- *How do they label themselves? (Helps if it 'sounds' specific but is actually broad.)*
 - *Builders*
 - *Founders*
 - *Early Founders*
 - *Operators/Ops guy*
 - *System thinkers*
 - *Entrepreneurs*

- *High-agency individuals*
- *Deep thinkers*
- *Lifelong learners*
- *Startup-minded*
- *Non-traditional path*

They want identity labels that imply:

- *Intelligence*
- *Autonomy*
- *Seriousness*
- *Competence*

They reject labels that imply:

- *Motivation junkie*
- *Hustle bro*
- *Influencer*
- *Alpha male*

Purpose (Why):

- *What are their main driving forces?*
 - Level 1: Security (But With Leverage)*
 - Level 2: Status & Esteem*
 - Level 3: Belonging*
 - Level 4: Self-Actualization*

To become a high-competence, high-leverage founder/operator who earns respect and autonomy through real skill.

- *Use 'Maslow's Hierarchy of Needs' if you need help.*

Level 1: Security (But With Leverage)

They want:

- *Financial independence*
- *Not being controlled by institutions*
- *Not being forced into slow systems*
- *Not being exploited by incompetence*

This is survival — but upgraded.

Level 2: Status & Esteem

This is huge.

They want:

- *To be respected for competence*
- *To earn status the “right” way*
- *To win in a fair system*
- *To be seen as capable*
- *To not be average*

They fear:

- *Wasting potential*
 - *Watching less competent people succeed*
 - *Being invisible*
-

Level 3: Belonging

They are intellectually lonely.

They want:

- *Peers who think like them*
- *Intelligent conversation*
- *Strategic friendships*
- *Non-degenerate masculine culture*
- *Moral alignment without extremism*

They feel:

"No one around me thinks like this."

Level 4: Self-Actualization

This is the real driver.

They want:

- *Mastery*
- *Identity evolution*
- *Long-term competence*
- *Becoming formidable*
- *Becoming someone who cannot be ignored*

They believe:

"If I build enough skill and leverage, my life trajectory changes."

Core Psychological Drives

- *Competence*
- *Autonomy*
- *Respect*
- *Intellectual stimulation*
- *Strategic power*
- *Long-term positioning*

Goal (What):

- *What is their big goal?*
To become a high-competence, high-leverage founder/operator who earns respect and autonomy through real skill.
- *What 'Method' are they trying to achieve their 'Purpose' with?*
 - *Learn deeply*
 - *Stack skills*
 - *Use AI*
 - *Build systems*
 - *Launch something*
 - *Attract smart people*
 - *Build a team*
 - *Scale*
- *What is the problem that they think will 'change everything' if they solve it?*

"If I just..."

- *Become consistent*
- *Stop doing stupid things*
- *Stop procrastinating*
- *Find the perfect career path*
- *Get a client*
- *Move out to a tier one city*
- *Stop overlearning*
- *Build in public*
- *Find the right network*
- *Ship something real*
- *Monetize properly*
- *Get clarity*
- *Gain leverage*

WHAT HE NEED?

Directional constraint.

A skill hierarchy.

Clear execution map.

Market realism.

Identity grounding.

Public positioning framework.

Intelligent peers who actually ship.

WHAT HE LACKS

He is not lazy.

He is under-directed.

He is not stupid.

He is under-executed.

He is not delusional.

He is under-exposed to market friction.

SECTION 2 | THE PAINFUL DETAILS *(the most powerful 3-5 for each)*

Current Situation (Negative):

- *What is going on in their current day-to-day life?*

Right now their days look something like this.

They wake up either early because they read somewhere that morning deep work is elite, or late because they were watching AI breakdowns at 1am. They open YouTube or X “just to check updates” and end up consuming for an hour. They save posts. They screenshot threads. They tell themselves they’re researching.

Some of them are in college. Sitting in classes that feel slow and outdated. Half listening, half thinking about some SaaS idea or AI workflow they saw. Others are doing internships or junior jobs that pay something, but it feels small. Like they’re capable of more.

They freelance a bit. Maybe \$300 here, \$800 there, sometimes \$2k in a good month. Enough to feel independent, not enough to feel powerful. It’s inconsistent. Clients ghost. Scope creeps. They know they’re smart but the money doesn’t reflect it yet.

They spend a lot of time learning. Courses. Podcasts. Notes in Notion or Google Docs. Highlighting books. Rewriting frameworks. Thinking about systems. They genuinely understand a lot. But shipping consistently? That’s where it breaks.

They tell themselves they’re “preparing properly.” Deep down they know they’re delaying exposure.

They want like-minded friends but don’t want to be the one reaching out first. They want to post content but don’t want to look stupid. They want to pick a market but are scared to commit and be wrong.

The thing they feel they can’t escape is this in-between phase. Not a beginner. Not a founder. Just almost.

They feel like time is moving and they're still calibrating.

What they envy is not flashy influencers. It's people who are clearly building something real.

Dream Situation (Positive):

- *What do they want their future life to look like?*

Their dream future isn't crazy luxury.

It looks like:

- Waking up knowing exactly what they're building.
- A small team or group chat of killers working together.
- Consistent monthly revenue that feels solid, not random.
- Parents not doubting them anymore.
- Freedom to travel or take breaks without anxiety.
- Being respected for competence, not noise.
- Posting online without fear because they've actually done things.

They want to spend their time building real products, not consuming endless content about building products.

They want to:

- Ship weekly.
- Talk strategy with smart friends.
- Improve skill deliberately.
- Study markets, not just mindset.
- Iterate on something that compounds.

They don't want to grind 18 hours a day forever. They want focused intensity that leads somewhere.

- *Whose lifestyle do they envy?*

They envy:

- Someone their age running a small but real SaaS.
- Someone publicly building and not caring about cringe.
- Someone with a tight circle of smart friends building together.
- Someone who chose a direction and went all in.
- Someone making consistent money from something they own.

Most of all, they want to stop feeling like potential and start feeling like proof.

- *What do they want to spend their time doing?*

They want to spend their time building something that feels real.

Not just watching breakdowns of businesses. Actually working on their own product, their own service, their own leverage.

They want to wake up and know exactly what the main thing is for the day. Open the laptop and work on something that compounds. Improving the product. Tweaking the offer. Talking to users. Testing ideas. Not jumping between random tutorials.

They want to spend time with a small group of smart people who are also building. Late night calls. Sharing screens. Giving feedback. Talking through positioning or strategy. Not small talk.

They want to spend time learning, but learning that directly feeds execution. Studying markets. Studying copy. Studying product. Not endless "motivation" content.

They want to work deeply for a few focused hours and then feel earned relaxation. Gym. Walks. Gaming. Conversations. Not guilt-filled scrolling.

They want to spend time creating. Writing. Shipping. Launching. Experimenting. Seeing results.

They don't want to spend their days:

- Sitting in lectures that feel outdated.
- Doing low-leverage internship tasks.
- Consuming content they'll never apply.
- Debating ideas with people who aren't building.
- Pretending they're making progress when they're just preparing.

They want their time to feel intentional. Measured. Moving forward.

They don't want to feel busy.

They want to feel in motion.

Pain Points (Negative)

There are days when they sit in a lab room staring at a blank screen, and the professor is explaining how to build a calculator in Java for the third time, and something inside them just tightens. Not because they can't do it. They can. That's the problem. They can already see how trivial it is. They know they could prompt an AI tool and generate the entire thing in seconds. They've seen people spin up full-stack apps in a weekend using modern tools. And yet here they are, being graded on whether their switch statement compiles correctly.

The professor says this is "important for fundamentals." The attendance sheet is being passed around. The deadline is next week. And they're thinking about the fact that someone online just launched a micro SaaS with zero funding and is already making more than their internship stipend. The dissonance is loud.

It's not that they hate learning. They actually care about depth. They are the ones who try to understand what's under the hood. They are the ones who pause the video and rewind it. They are the ones who open the documentation and read it. But being forced to spend weeks on something that feels like it belongs in 2014 makes them feel like they're moving in slow motion while the world is sprinting.

Then there's the internship. The boss says to update a spreadsheet. Or sit in another meeting. Or tweak a slide deck that no one will remember next week. They nod and say yes. They need the line on their resume. They need the money. But inside, they're irritated. Not because the task is hard, but

because it feels small. Replaceable. Anyone could do this. That's what bothers them. They don't want to be anyone.

They look at their friends who skip to the end of Oracle or Microsoft certification courses just to get the badge and move on. The system rewards the badge, not the understanding. And while they're sitting there trying to actually grasp the concept, trying to internalize it, they feel like they're playing a different game than everyone else. A slower, deeper game. And they wonder if that game even wins anymore.

At night, they scroll. They see AI tools building websites in minutes. They see no-code platforms generating full apps. They see people automating entire workflows. And then they look back at their assignment: build a static HTML page by hand. Write CSS manually. Submit as a zip file. It feels absurd. Like training for a war that already ended.

They don't just feel bored. They feel trapped between two timelines. One timeline where institutions are still operating at their old pace. Another timeline where the internet is compounding at an insane rate. They can see the second one clearly. They want to live there. But their current life keeps pulling them back into the first.

Months are slipping. They remember conversations six months ago about going all in on AI automation. About starting something. About not being average. And now it's another semester. Another deadline. Another small paycheck. They feel like they're orbiting their own ambition without landing anywhere.

They don't want to rebel dramatically. They don't want to be reckless. They just want their time to match their potential. And every time they're forced to build something trivial while knowing a more leveraged path exists, it creates this quiet resentment. Not toward a specific person. Toward the pace of their own life.

What hurts the most is not the workload. It's the feeling that they are capable of more, and yet their days are being spent proving competence in systems that don't measure what they actually care about.

They're not afraid of hard work. They're afraid of spending their hardest years on the wrong layer of the game.

Desire Points (Positive):

- *How do they WANT TO FEEL about the things they desire in their dream situation?*
- *Think emotionally for these.*
- *What specific words trigger deep desire in your audience?*

They want to feel alive in a way that feels earned. They imagine finishing a hard stretch of focused work and then booking a short trip with friends to a beach where the air feels different and the conversations feel expansive. They see themselves renting an apartment in a city that feels bigger than their hometown, a place with natural light coming through large windows, laptops on a wooden table, whiteboards filled with plans, and the quiet satisfaction of knowing that the rent is covered by something they built.

They are drawn to beautiful environments because beauty feels like confirmation that life is opening up. Beaches, rooftop cafés, half five-star hotels where the lobby smells expensive and the lighting is warm, co-working spaces filled with founders who speak in terms of product and distribution rather than exams and attendance. They want to sit in those spaces and feel like they belong there because they earned their place.

There is also a deeper layer to this desire. They want relationships that feel aligned and elevated. Friends who are serious about growth, conversations that stretch their thinking, partners who share similar ambition and curiosity, people who talk about ideas, markets, philosophy, health, and the future. They want to feel emotionally connected while still feeling driven, to enjoy closeness without sacrificing ambition.

They are fascinated by the idea of destiny in a grounded way, the sense that their abilities and their timing are aligning. They want to look back at their early twenties and feel that they stepped into their path instead of drifting. They imagine a version of themselves who took bold but intelligent decisions, who moved cities when it felt right, who built something real with friends, who experienced beauty and progress at the same time.

They want to feel expansive. Walking along a beach after shipping a product update and discussing growth strategy with a close friend. Checking into a clean, modern apartment in Bangalore or San Francisco and feeling that their life has widened. Hosting dinners with other builders, talking about future plans while music plays softly in the background. That combination of material comfort, meaningful relationships, and visible progress creates a sense of fullness that they deeply crave.

Words that carry emotional weight for them in this space are freedom, elegance, expansive, elevated, aligned, global, refined, cultured, connected, abundant, luminous, magnetic, secure, earned, and destined. They want their life to feel intentional and beautiful, with work, money, relationships, and environment all moving in the same direction.

SECTION 3 | BELIEFS *(add as many as possible, but keep them ranked in order of importance)*

Method False Beliefs:

MICRO PROBLEM 1: Become Consistent

Method False Beliefs

- “Consistency is for boring people who don’t think deeply; real intelligent people work in bursts of insight.”
- “If I don’t feel inspired, forcing consistency will just produce low-quality mediocre work.”
- “Consistency only works when the path is clear, and my path isn’t clear yet.”
- “The market moves too fast for slow, consistent effort to matter.”
- “Consistency without immediate results is just self-deception.”
- “Systems and routines kill creativity and intuition.”
- “Discipline-based productivity ignores emotional complexity and mental health.”
- “Consistency only works for people with stable environments and strong support systems.”
- “If I commit to consistency publicly and fail, I’ll look weak and unreliable.”
- “If something was truly aligned with me, consistency would feel natural and effortless.”

Internal False Beliefs

- “I am not wired for discipline like those hyper-conscientious founders.”
 - “My dopamine system is fried; I literally cannot sustain boring effort.”
 - “I always sabotage myself when things start working.”
 - “I secretly enjoy chaos more than structure.”
 - “I don’t respect my own plans enough to follow through.”
 - “When resistance hits, it means I’m not built for this.”
 - “I am too emotionally volatile to be consistent long term.”
 - “I am a slow thinker and slow iterater; I can’t match the pace of killers.”
 - “I only perform under extreme pressure, not steady execution.”
 - “Deep down I don’t trust myself to show up daily without burning out.”
-

MICRO PROBLEM 2: Stop Procrastinating / Stop Doing Stupid Things

Method False Beliefs

- “Small dopamine hits are necessary to survive stress; cutting them out will make me miserable.”
- “If I remove video games, porn, scrolling, I’ll lose my edge and sense of fun.”
- “People who are ultra-focused are socially dry and uninteresting.”
- “Trying to eliminate distractions completely is unrealistic in modern life.”
- “If I try to be extreme about self-control, I’ll swing back harder later.”
- “Rest and indulgence are rewards I deserve regardless of output.”
- “Procrastination is just a symptom; fixing it won’t solve my bigger confusion.”
- “High performers also waste time; they just hide it better.”
- “If I can think deeply and plan strategically, a bit of indulgence won’t matter.”
- “Cutting off pleasure before success makes life too bleak.”

Internal False Beliefs

- “I don’t have the willpower to override urges consistently.”
- “When I feel low or uncertain, I automatically escape.”
- “I use distractions because I don’t actually believe my work will pay off.”
- “I am addicted and I don’t fully want to quit.”
- “When I face uncertainty, I retreat into comfort.”
- “I don’t believe I deserve discipline.”
- “If I stop numbing myself, I’ll have to face how behind I am.”
- “I am weak in private even if I look strong in public.”

- “My identity is inconsistent, so my behavior follows.”
 - “I can’t handle long periods of discomfort without relief.”
-

MICRO PROBLEM 3: Find the Perfect Career Path

Method False Beliefs

- “If I pick the wrong path now, I’ll waste years and permanently damage my trajectory.”
- “The right path should feel obvious and aligned from the beginning.”
- “If I don’t fully understand the market before entering, I’ll get exploited.”
- “The market is already saturated; unless I have an asymmetric edge, it’s pointless.”
- “Without a strong network, choosing a path is blind and risky.”
- “If I commit publicly and then pivot, I’ll lose status.”
- “Choosing too early limits my intelligence and flexibility.”
- “I need to master fundamentals before entering any arena.”
- “The perfect path should combine money, meaning, status, and freedom immediately.”
- “If I’m not in the top 10% early, I probably won’t win long term.”

Internal False Beliefs

- “I don’t trust my judgment enough to choose correctly.”
- “I am not decisive; I overthink everything.”
- “I am scared that I’ll commit and realize I’m average in that field.”
- “If I choose something and fail, it confirms I’m not special.”
- “I am not resilient enough to pivot publicly.”
- “I hide behind research because I’m afraid of exposure.”
- “I need permission or validation before committing.”
- “I secretly want to avoid responsibility for choosing.”
- “If I choose wrongly, I’ll disappoint everyone watching me.”
- “Deep down, I fear I’m not built for any elite path.”

MICRO PROBLEM 4: Get a Client

Method False Beliefs

- “Cold outreach doesn’t work anymore; everyone ignores it.”
- “Clients only trust people with huge brands and studios.”
- “People from India or tier-2/3 cities can’t win international clients easily.”
- “High-ticket clients only buy from established agencies.”

- “Sales calls are manipulative and smart people see through them.”
- “If I don’t have insane case studies, I shouldn’t even try.”
- “Clients can smell inexperience instantly.”
- “Pricing high without social proof is delusional.”
- “Service businesses are overcrowded and dying because of AI.”
- “Unless I automate everything perfectly, outreach will just waste time.”

Internal False Beliefs

- “I don’t feel worthy of charging more than \$500.”
 - “When I speak to older founders, I shrink.”
 - “I don’t trust myself to deliver real outcomes.”
 - “I sound unsure and people can sense it.”
 - “I avoid closing because rejection hits my ego too hard.”
 - “If someone challenges me on a call, I lose frame immediately.”
 - “I don’t feel authoritative enough to diagnose someone’s business.”
 - “I secretly believe I am still a student pretending to be a professional.”
 - “If I get a big client, I might mess it up and prove I’m incompetent.”
 - “Deep down I don’t believe I can create massive value consistently.”
-

MICRO PROBLEM 5: Move to a Tier 1 City

Method False Beliefs

- “Without strong capital, moving to a tier-1 city is reckless.”
- “Cities like Bangalore or SF only reward already-connected people.”
- “If I move without stability, I’ll burn out and crawl back.”
- “Relocating doesn’t automatically change outcomes; it’s overhyped.”
- “High cost of living will distract me from building.”
- “Everyone there is smarter and more advanced than me.”
- “If I fail there, it will feel more humiliating.”
- “Networking in those cities is cliquey and closed.”
- “You need elite credentials to belong in those environments.”
- “Geography only helps if you’re already exceptional.”

Internal False Beliefs

- “I don’t feel financially ready to bet on myself.”
- “I am too attached to family comfort.”

- “I fear loneliness if I move.”
 - “I doubt I can compete in elite ecosystems.”
 - “If I leave and struggle, I’ll confirm my family’s doubts.”
 - “I am not bold enough to restart in a new city.”
 - “I depend too much on familiarity to function.”
 - “I don’t trust my survival instincts fully.”
 - “I fear being exposed as average among killers.”
 - “Deep down I don’t believe I deserve to play in bigger arenas.”
-

MICRO PROBLEM 6: Stop Overlearning

Method False Beliefs

- “Understanding deeply before acting is superior to messy execution.”
- “If I don’t fully grasp the system, iteration is dangerous.”
- “Most people fail because they act without thinking.”
- “Learning gives me leverage; action is brute force.”
- “If I rush into the market, I’ll get exploited.”
- “Clarity must precede commitment.”
- “If I find the right asymmetric insight, I won’t need volume.”
- “Execution without strategic clarity is low-level behavior.”
- “The smartest people think more than they act.”
- “Once I fully understand, action will be effortless.”

Internal False Beliefs

- “I hide in learning because I’m scared to be judged.”
 - “I enjoy feeling intelligent more than feeling effective.”
 - “I use planning to avoid exposure.”
 - “If I ship and it’s mediocre, my self-image collapses.”
 - “I don’t trust my ability to adjust in real time.”
 - “I fear being publicly wrong.”
 - “I romanticize clarity because I fear uncertainty.”
 - “If I start before I’m ready, I’ll look foolish.”
 - “I identify as a thinker more than a doer.”
 - “Deep down I don’t believe I can win through repetition.”
-

MICRO PROBLEM 7: Build in Public

Method False Beliefs

- “People judge beginners harshly online.”
- “If I build in public and fail, it becomes permanent.”
- “Visibility increases risk and scrutiny.”
- “If I show effort, I look try-hard.”
- “Only successful people should document publicly.”
- “Public building only works if you’re already interesting.”
- “If I change direction publicly, I lose credibility.”
- “The internet rewards controversy, not nuance.”
- “If I expose my process, competitors can copy me.”
- “Posting too early signals desperation.”

Internal False Beliefs

- “I don’t believe my thinking is valuable enough to share.”
- “I fear being called fake or delusional.”
- “I care too much about what specific people think.”
- “I don’t want teachers or relatives seeing my attempts.”
- “I feel like an imposter when I talk confidently.”
- “If I post boldly, I fear authority backlash.”
- “I struggle to hold conviction publicly.”
- “I overestimate how much people are watching me.”
- “I don’t feel emotionally stable enough for public feedback.”
- “Deep down, I fear visibility because it forces growth.”

MICRO PROBLEM 8: Find the Right Network

Method False Beliefs

- “High-level people only network with people at their level.”
- “Serious founders don’t have time for beginners.”
- “Networking is fake and transactional.”
- “If I reach out cold, I’ll be ignored.”
- “Most online communities are full of noise and ego.”
- “Real relationships only happen organically, not intentionally.”
- “If I try too hard to network, I’ll look needy.”
- “Elite circles are closed unless you’re introduced.”

- “Value exchange must be equal from day one.”
- “If I don’t already have status, networking is pointless.”

Internal False Beliefs

- “I don’t feel interesting enough to add value.”
 - “I shrink around people more advanced than me.”
 - “I overthink messages and never send them.”
 - “I don’t believe I deserve proximity to elite builders.”
 - “I’m scared they’ll see through me.”
 - “I hesitate to ask because I fear rejection.”
 - “I don’t trust my social skills in high-level rooms.”
 - “I feel inferior in rooms with high performers.”
 - “I don’t know what I can offer yet.”
 - “Deep down, I fear being the least impressive person in the group.”
-

MICRO PROBLEM 9: Ship Something Real

Method False Beliefs

- “If it’s not differentiated, it’s pointless to launch.”
- “The market only rewards polished, complete products.”
- “If I launch too early, I burn reputation.”
- “Execution without a unique angle guarantees mediocrity.”
- “Unless I can scale it, it’s not worth starting.”
- “Shipping something small won’t move the needle.”
- “If I can’t commit fully, I shouldn’t start.”
- “Launching publicly locks me into that identity.”
- “If I fail publicly, competitors will use it against me.”
- “If I don’t understand distribution perfectly, launching is premature.”

Internal False Beliefs

- “I don’t believe I can finish what I start.”
- “I abandon projects when they stop feeling exciting.”
- “I fear the moment where reality tests my idea.”
- “I feel shame when my output isn’t elite.”
- “I tie my identity to my product’s performance.”
- “If it flops, it confirms I’m not cut out.”

- “I struggle to tolerate mediocrity in my early attempts.”
 - “I procrastinate at the final stretch.”
 - “I’m more comfortable ideating than delivering.”
 - “Deep down, I fear proof more than failure.”
-

MICRO PROBLEM 10: Monetize Properly

Method False Beliefs

- “Making money from something intellectual cheapens it.”
- “Charging high prices requires manipulation.”
- “If I monetize too early, I lose authenticity.”
- “Value should speak for itself without persuasion.”
- “Sales and marketing are morally grey.”
- “Money changes people and attracts envy.”
- “If I price high, I must be flawless.”
- “Revenue focus kills creativity.”
- “Clients care more about brand image than competence.”
- “Scaling revenue requires cutting ethical corners.”

Internal False Beliefs

- “I don’t feel comfortable asking for money.”
 - “I feel shame when I attach a price to my work.”
 - “I doubt I can consistently justify my pricing.”
 - “I’m scared of being exposed as not worth it.”
 - “I hesitate to enforce boundaries with clients.”
 - “I fear losing likability when I negotiate.”
 - “I don’t trust myself to handle financial pressure.”
 - “I associate money with stress and conflict.”
 - “I subconsciously sabotage income growth.”
 - “Deep down, I don’t fully believe I deserve abundance.”
-

MICRO PROBLEM 11: Gain Leverage

Method False Beliefs

- “True leverage requires massive capital or elite networks.”
- “Automation replaces depth.”
- “Personal brands are oversaturated.”
- “You need to be exceptional to create leverage.”
- “Leverage is reserved for early movers.”
- “AI tools will commoditize everything anyway.”
- “Without insider access, leverage is limited.”
- “If I delegate too early, quality drops.”
- “Leverage increases risk exposure.”
- “Only founders with scale deserve leverage.”

Internal False Beliefs

- “I still operate like an employee mentally.”
- “I struggle to think in systems.”
- “I default to trading time for validation.”
- “I don’t trust others to execute.”
- “I lack conviction to double down.”
- “I think small even when I dream big.”
- “I fear responsibility that comes with leverage.”
- “I avoid committing to one scalable path.”
- “I underestimate my asymmetric advantages.”
- “Deep down, I fear visibility that leverage creates.”

MICRO PROBLEM 12: Scale

Method False Beliefs

- “Scaling amplifies flaws and chaos.”
- “More revenue means more stress.”
- “Growth destroys lifestyle balance.”
- “Scaling requires ruthless personality traits.”
- “If I scale fast, I’ll lose control.”
- “You need A-class talent to scale.”
- “Markets punish late entrants.”
- “Competition will crush me at higher levels.”
- “Scaling invites scrutiny and legal risk.”
- “Only privileged founders survive at scale.”

Internal False Beliefs

- “I don’t see myself as a CEO.”
- “I fear becoming arrogant or corrupted by growth.”
- “I doubt I can lead strong personalities.”
- “I get overwhelmed by complexity.”
- “I self-sabotage when momentum builds.”
- “I fear outgrowing my current identity.”
- “I don’t believe I can sustain high performance long term.”
- “I struggle with long-term consistency at higher stakes.”
- “I fear being responsible for other people’s livelihoods.”
- “Deep down, I question whether I’m built for greatness.”

INTERNAL FALSE BELIEFS

(Hesitation Layer – Identity + Control)

These are subtle. Not dramatic.

1. If I automate too much, I’ll weaken my core skill.
2. I want to fully understand before I accelerate.
3. If I move too fast with AI, I’ll skip fundamentals.
4. I don’t want to build something I don’t deeply understand.
5. I prefer knowing every line in my system.
6. If AI structures differently than me, I lose clarity.
7. I don’t trust outputs I didn’t mentally simulate.
8. I don’t want hidden logic in my codebase.
9. I value craftsmanship over speed.

10. Acceleration feels like skipping steps.
11. I want earned mastery, not assisted output.
12. If I rely on AI early, I won't build intuition.
13. AI introduces unpredictability.
14. I want architectural control.
15. I don't want to debug something I didn't originate.
16. If AI changes naming conventions, mental mapping breaks.
17. I prefer linear learning over leverage learning.
18. I don't want my thinking outsourced.
19. I don't want to become tool-dependent.
20. I want to prove I can do it myself first.

Notice:

This is not "AI is fake."

This is:

"I don't want my depth compromised."

That's intelligent hesitation.

EXTERNAL FALSE BELIEFS

(Environment / Professional Culture Layer)

These are subtle too.

1. Most serious devs don't heavily use AI.
2. In my internship, employees weren't using AI.
3. AI coding is mostly hype.
4. Companies value fundamentals more than tool usage.
5. If everyone uses AI, differentiation disappears.
6. Real hiring tests don't allow AI.
7. AI-generated code increases technical debt.
8. AI is unreliable at scale.
9. AI struggles with long-term architecture.
10. AI is good for syntax, not systems.
11. AI makes junior devs lazy.
12. Over-automation reduces craftsmanship.
13. The industry still respects raw skill more.
14. AI cannot reason like experienced engineers.
15. Heavy AI usage may hurt credibility.
16. AI makes code less readable long-term.
17. AI output is often inconsistent.
18. AI cannot maintain project philosophy.

19. AI doesn't fully grasp domain nuance.

20. Overusing AI may reduce debugging ability.

Again:

These aren't emotional tantrums.

They're cautious professional beliefs.

METHOD FALSE BELIEFS

(This is the real friction layer)

Now we get precise.

1. AI should produce clean architecture in one go.
2. If I have to refine prompts heavily, it's inefficient.
3. AI should adapt to my structure automatically.
4. If AI output differs from my naming scheme, it's misaligned.
5. AI cannot maintain cross-file context reliably.
6. AI is unsafe mid-project.
7. AI is only good before coding starts.
8. AI is mostly for brainstorming.
9. AI is dangerous for production code.
10. AI cannot co-exist with disciplined structure.

11. If I use AI, I must rewrite large chunks.
12. AI cannot integrate with my mental model.
13. If I don't manually write it, I won't internalize it.
14. AI assistance equals partial understanding.
15. You must master fully first, then use AI.
16. AI use should be minimal until you're elite.
17. AI is acceleration, not a learning tool.
18. AI cannot improve reasoning ability.
19. AI should be used sparingly to preserve skill.
20. AI works best only for small, isolated tasks.

This is where your leverage angle lives.

Perceived Micro-Problems:

- *In their opinion, why haven't they been able to achieve the 'Method' or solve the big problem they've been trying to solve?*
- *What do they consider to be the most painful 'micro-problems' inside the big problem?*
- *If you were to make a course to be the bridge from where they are now to getting their dream outcome, what would be the small problems they'd have to solve to get there?*

1. Become Consistent

Why they think they haven't solved it:

They think consistency fails because their energy fluctuates, their mood fluctuates, and their clarity fluctuates. They believe they need stable motivation before stable execution.

Smaller painful problems inside this:

- They don't sleep properly, so mornings collapse.
- They don't define one "main thing" per day.
- Their environment triggers distraction immediately.
- They confuse planning with progress.
- They don't track execution, so they don't see streaks.
- They don't reduce scope, so tasks feel heavy.
- They set unrealistic daily expectations and burn out.
- They lack a clear weekly scoreboard.
- They don't separate deep work from shallow work.
- They let one bad day turn into a bad week.

If you built a bridge here, it would include:

Energy regulation → clarity ritual → daily constraint system → weekly scorecard → friction removal
→ streak psychology → emotional regulation under resistance.

2. Stop Procrastinating / Stop Self-Sabotage

Why they think they haven't solved it:

They believe procrastination is a character flaw or dopamine addiction rather than an avoidance of uncertainty and identity risk.

Smaller painful problems:

- They open social media automatically when stuck.
- They don't tolerate "ugly first drafts."
- They escalate difficulty too fast.
- They don't know how to sit with anxiety.
- They feel small after comparing themselves.
- They don't define what "finished" means.
- They use learning as socially acceptable avoidance.
- They attach identity to output too early.
- They reward themselves before earning it.
- They don't have a frictionless start protocol.

The bridge here would solve:

Impulse control → uncertainty tolerance → identity detachment → anti-avoidance protocol → exposure training → delayed reward restructuring.

3. Find the Perfect Career Path

Why they think they haven't solved it:

They believe the right path must be strategically optimal, morally aligned, socially acceptable, financially scalable, and personally fulfilling from day one.

Smaller painful problems:

- They cannot distinguish exploration from commitment.
- They over-index on macro trends instead of personal traction.
- They don't test small market bets.
- They don't track signal from feedback loops.
- They overvalue prestige paths.
- They fear sunk cost.
- They lack decision frameworks.
- They consume more than they test.
- They don't know their unfair advantages.
- They fear public pivoting.

The bridge here would teach:

Market experimentation → rapid micro-bets → traction-based decision making → identity-fluid commitment → asymmetric leverage mapping.

4. Get a Client

Why they think they haven't solved it:

They think the barrier is skill or authority, but the real friction is fear of dominance and value assertion.

Smaller painful problems:

- They don't know how to define a narrow offer.
- They don't speak directly to pain in messaging.
- They don't ask directly for calls.
- They fear sending volume outreach.
- They hesitate to anchor high prices.
- They struggle to handle objections calmly.
- They don't qualify properly.
- They avoid follow-up.
- They under-scope deliverables.
- They lack post-call structure.

Bridge components:

Offer clarity → niche narrowing → outreach scripting → frame control → objection handling → pricing psychology → pipeline tracking.

5. Move to Tier 1 City

Why they think they haven't solved it:

They believe they need certainty before risk, but relocation is inherently a risk multiplier.

Smaller painful problems:

- They don't know how much runway they actually need.
- They don't calculate downside properly.
- They overestimate lifestyle cost.
- They don't build remote income first.
- They lack co-living strategy.
- They don't build city-specific network before moving.
- They attach identity to home comfort.
- They lack relocation timeline planning.
- They fear judgment if they return.
- They don't create a 90-day survival plan.

Bridge:

Runway math → downside mapping → pre-move income stacking → network pre-seeding → 90-day performance sprint plan.

6. Stop Overlearning

Why they think they haven't solved it:

They believe more clarity equals less risk, so they delay action until they feel safe.

Smaller painful problems:

- They don't cap research time.
- They don't separate learning-for-action vs learning-for-ego.
- They don't define a test cycle.
- They don't measure output per week.
- They fear releasing imperfect thinking.
- They overestimate complexity.
- They don't build shipping deadlines.
- They don't use constraint-based execution.
- They chase new frameworks constantly.
- They equate insight with momentum.

Bridge:

Execution quotas → learning caps → test-and-release cycles → weekly shipping requirement → public accountability loops.

7. Build in Public

Why they think they haven't solved it:

They believe visibility amplifies weakness instead of accelerating growth.

Smaller painful problems:

- They don't know what to document.
- They don't know their positioning.
- They fear specific people watching.
- They over-edit tone.
- They wait for perfect articulation.
- They don't build content systems.
- They don't repurpose properly.
- They fear backlash.

- They tie worth to engagement.
- They lack narrative continuity.

Bridge:

Narrative identity → content pillars → low-friction publishing → repurposing system → detachment from metrics.

8. Find the Right Network

Why they think they haven't solved it:

They believe network must precede value rather than emerge from value.

Smaller painful problems:

- They don't host small rooms.
- They don't initiate conversations.
- They don't follow up.
- They don't build shared projects.
- They don't create value-first positioning.
- They don't identify who they actually need.
- They fear asking for help.
- They don't stay consistent in groups.
- They don't create gravity.
- They over-romanticize elite rooms.

Bridge:

Micro-room creation → shared build sessions → value-first introductions → weekly contact rhythm → collaborative projects.

9. Ship Something Real

Why they think they haven't solved it:

They believe output defines identity permanently.

Smaller painful problems:

- They don't define MVP scope.
- They overcomplicate feature sets.
- They don't ship to small audiences first.
- They don't measure real demand.
- They lack deadline pressure.
- They abandon during discomfort spike.
- They don't use pre-selling.
- They don't gather early feedback.
- They overbuild before validation.
- They fear being ordinary.

Bridge:

MVP compression → pre-sell validation → public deadlines → demand-first development → small-batch release.

10. Monetize Properly → Gain Leverage → Scale

Why they think they haven't solved it:

They think scale requires moral compromise and psychological transformation into someone ruthless.

Smaller painful problems:

- They don't detach self-worth from revenue.
- They don't build recurring offers.
- They don't reinvest strategically.
- They don't document processes.
- They don't hire early enough.
- They don't build distribution assets.
- They avoid financial dashboards.
- They don't understand unit economics.
- They fear leading others.
- They fear becoming visible at scale.

Bridge:

Ethical monetization model → recurring revenue systems → leverage stacking → SOP building → founder identity transition → emotional stability at scale.

SECTION 4 | GENERAL CONDITIONS *(Make a list of all the 'General Conditions' you've found)*

General Conditions:

- *What are the general conditions you've found?*
 - *In what ways can you appeal to almost all humans?*
 - *EX: New/Easy/Safe/Big, Etc*
-

SECTION 5 | Variables of Likeness *(Covered in 'Liking-Relatability' module)*

1. *What words/phrases/examples/stories can you use in your marketing/copy to be more relatable/similar to your audience?*

They want autonomy. They want to feel like they chose the path, not that someone convinced them into it. The moment something smells like a funnel or manipulation, they mentally step back. They would rather discover something themselves than be led there. They value sovereignty in thinking.

They do not want to be "sold." They want to be respected. They want to be presented with logic, systems, evidence, and then make the decision on their own. If they feel pressured, they resist. If they feel understood, they lean in.

They want predictability in structure, but upside in outcome. They are willing to take risk if it is intelligent risk. They are allergic to blind gambling, but they are attracted to asymmetric bets.

They want to feel competent. Not hyped. Not emotionally pumped. Competent. They like frameworks, models, first-principles thinking, long-term strategy. They want things to make sense.

They want moral alignment. They do not want to feel like they are entering a shady arena. If the path feels exploitative or intellectually dishonest, they disengage.

They want status, but earned status. Not clout. Not fake luxury. They want to be respected for capability.

They want to feel ahead of the curve. Being early feels intelligent. Being mainstream feels mediocre. They are drawn to emerging markets, AI, new tools, frontier spaces.

They want depth. Surface-level content feels insulting to them. They like nuance, layered thinking, and conceptual clarity.

They want self-authorship. The feeling that they built their life deliberately rather than drifting into it.

Now in terms of universal human appeals, the conditions that work almost everywhere still apply, just translated into their language.

New — they are attracted to frontier spaces, emerging tools, early-stage movements, AI waves, new frameworks.

Easy — not lazy easy, but cognitively clean. Clear steps. Clear systems. Reduced chaos. They want friction reduced.

Safe — psychological safety, not comfort. A structured way to take risk. Defined downside. Controlled exposure.

Big — large upside. Large identity shift. Large leverage. They want to play big games.

Fast — visible progress quickly, even if the final outcome is long-term. They need proof of motion.

Certain — clear principles. Clear cause-and-effect. Clear maps.

Elite — selective environment. Serious people. High standards.

Autonomous — no guru worship. No dependency. Tools, not commandments.

Rational — data-backed, principle-backed, market-backed.

Aligned — moral clarity. Ethical execution.

Expandable — a path that compounds rather than caps out.

Because of their personality orientation, especially INTJ/ENTJ/INFJ-like tendencies, they respond strongly to:

Strategic framing
Long-term thinking
Identity evolution
System optimization
Competence signaling
Intellectual respect

If you violate their autonomy, they leave.

If you insult their intelligence, they disengage.

If you provide structure + upside + moral clarity + status pathway + autonomy, they commit.

The meta-condition behind everything is this:

They want to feel like intelligent rebels building something meaningful on their own terms, inside a system that makes sense.

2. How can you be more familiar/consistent with your audience?
3. What are some failures/imperfections you can share with your audience that would make you more authentic/human to your audience?
4. How can you appear happier/warmer when engaging with your audience?
5. How can you show your audience you're competent without directly telling them/being arrogant?
6. Where/how can you use humor and stories in your copy/marketing?
7. How can you use reciprocity/creativity to give dope free value to your audience?
8. How can you be more attractive/confident in your marketing?
9. How can you display your skill without being arrogant? How can you leverage what social proof you have?
10. Are you ensuring you're being 'non-needy' in your marketing/copy? (Writing/speaking in a way that seems like you don't really care whether they take the action or not.)
11. How can you use the Cult Leader 5:
 - a. What dreams do they have, and how can you encourage them?
 - b. What failures do they have, and how can you blame them on something/someone else?
 - c. What fears do they have, and how can you allay those fears and make them feel safe?
 - d. What suspensions do they have, and how can you confirm those suspicions?
 - e. What common enemies do you have, and how can you throw rocks at those enemies?

1 How to Be More Familiar / Consistent With Them

Speak their language

Use:

- Architecture
- Refactor
- Context window
- Variable naming
- Debug flow
- Iteration
- System design
- Trade-offs

Don't speak like:

"Unlock your full potential bro 🚀"

Speak like:

"If your output is generic, your constraints were generic."

Show you understand their hesitation

Say things like:

- "I also didn't like when GPT renamed my variables."
- "I don't blindly paste AI code either."

- “If I can’t mentally simulate it, I don’t ship it.”

When they feel understood, resistance drops.

Consistency Rule

Don’t oscillate between:

- Philosophical macro talk
- Emotional hype
- Casual bro tone
- Corporate tone

Pick one lane:

Calm, precise, slightly sharp.

2 Failures / Imperfections You Can Share

This is powerful with this audience.

Share things like:

- “My first prompts were garbage.”
- “I used to think AI was mid.”
- “I copy-pasted once and broke my entire project.”
- “I wasted weeks avoiding it.”
- “I thought mastery meant doing everything manually.”

These are safe admissions.

They increase credibility, not reduce it.

Avoid:

Self-pity.

Over-dramatic vulnerability.

Therapy tone.

Just technical humility.

3 How to Appear Happier / Warmer

You don't need fake energy.

Instead:

- Appreciate their intelligence.
- Validate their skepticism.
- Smile through writing (subtle humor).
- Avoid attacking them.

Example tone shift:

Instead of:

"You're wrong about AI."

Say:

"I get why you think that. I thought the same."

Warmth = Respect.

4 Show Competence Without Saying It

Never say:

“I know this deeply.”

“I’m an expert.”

Instead:

- Break things down clearly.
- Predict objections before they say them.
- Use clean mental models.
- Explain trade-offs neutrally.

Competence = clarity under complexity.

When you say:

“AI shifts difficulty upward.”

That signals depth without bragging.

5 Humor & Stories

Use:

Micro-stories from chats like that screenshot.

Example:

“I asked GPT to refactor my code once and it decided my variable naming system was wrong. I was offended for 3 minutes.”

Relatable humor > stand-up comedy.

Also:

Play with metaphors.

“Programming languages are already abstraction layers. AI is just another wrapper. You’re already living inside wrappers.”

Light. Slight smirk energy.

6 Reciprocity / Dope Free Value

With this audience, free value must be:

Tactical.

Usable.

Intellectually satisfying.

Examples:

- “Here’s how I structure prompts for multi-file projects.”
- “Here’s my 5-step architecture refinement loop.”
- “Here’s how to prevent AI from renaming your variables.”
- “Here’s how to inject project context properly.”

Give them tools, not motivation.

They respect precision.

7 More Attractive / Confident Marketing

Confidence for this audience is:

- Calm tone
- No begging
- No urgency manipulation

- No “limited spots”
- No emotional guilt

Instead:

“If this resonates, cool. If not, keep building.”

That signals abundance.

Attractiveness = grounded certainty.

8 Display Skill Without Arrogance

Use demonstration.

Instead of:

“I use AI at a high level.”

Show:

Before prompt → generic output

After structured prompt → refined output

Explain why it worked.

Skill shown > skill claimed.

9 Non-Needy Frame

Never:

“Please join.”

“Don’t miss out.”

“You need this.”

Instead:

“If you’re serious about leverage, this is useful.”

“If not, keep grinding manually. No problem.”

Indifference increases authority.

10 Cult Leader 5 Applied To This Audience

Now the strategic layer.

DREAMS

Their dreams:

- Become elite engineers
- Build insane projects
- Ship fast
- Get high-paying jobs
- Maintain intellectual superiority
- Be respected
- Build something that feels powerful

Encourage:

“You don’t want to be average. You want to be dangerous.”

Frame AI as:

The amplifier for elite devs.

FAILURES (Blame Redirect)

Their failures:

- Slow progress
- Overbuilding
- Burnout
- Wasted time
- Debug loops
- Fear of shipping

Blame:

- Old education systems
- Industrial-era thinking
- “Suffer to earn” mentality
- Outdated dev pride culture
- Anti-leverage mindset

Not them.

External enemy = outdated thinking.

FEARS

They fear:

- Losing mastery
- Becoming dependent
- Being exposed as shallow
- Not understanding deeply
- Being replaced
- Skill dilution

Allay:

“AI doesn’t remove depth. It shifts depth.”

Make them feel:

More control, not less.

SUSPICIONS

They suspect:

- AI is overhyped.
- Most people use it lazily.
- Copy-paste devs won’t survive.
- Fundamentals still matter.
- Prompting is underrated.

Confirm:

“Yes. Most people are using it wrong.”

This builds alignment.

COMMON ENEMIES

Shared enemies:

- Lazy copy-paste culture
- Shallow YouTube tutorials
- Hype marketers
- “AI will replace everyone” panic
- Ego-driven dev culture
- Anti-leverage pride

Throw rocks at:

Shallow usage.
Not AI itself.

The Correct Positioning Frame

Not:

“AI is powerful bro.”

But:

“Elite devs use leverage without losing depth.”

Not:

“AI replaces skill.”

But:

“AI punishes vague thinking.”

That resonates with this persona.

SECTION 6 | Problem Chain (Covered in ‘Problem-Chains’ module.)

1. What are the ‘core desire(s)’ that your audience is trying to fulfil?
 - a. See ‘Pain-Confidence’ module.
2. What is the obvious external problem they currently blame their pain on?
 - a. What is their big goal?
 - b. This could also be described as their current awareness level.
 - c. EX: Make money. Lose weight. Etc.
3. What is the unique mechanism / specific problem that your product/service solves?
 - a. Remember: Specific, Unique, Casual, Simple
4. What is the logical chain of problems that someone would take in order to go from the obvious external problem to needing your unique mechanism?
 - a. What are the increasingly specific problems that lead them to the conclusion of needing your unique mechanism/specific problem?
 - b. The problem fractals.
5. What are the sub-mechanisms you can create to fall under your unique mechanism?
 - a. Follow the steps outlined above.
6. Important Reminders
 - a. Keep it simple. What makes the most logical sense to reach the conclusion?
 - b. It takes practice. The important part is that you can now SEE why you buy things, why people buy things, and you can start noticing it everywhere. We’ll cover tons of examples.
 - c. It takes time. The more time you spend thinking about the problem chain for what you sell, the more discoveries you will make.

1 How to Be More Familiar / Consistent With Them

Speak their language

Use:

- Architecture
- Refactor
- Context window
- Variable naming
- Debug flow
- Iteration
- System design
- Trade-offs

Don't speak like:

"Unlock your full potential bro 🚀"

Speak like:

"If your output is generic, your constraints were generic."

Show you understand their hesitation

Say things like:

- "I also didn't like when GPT renamed my variables."
- "I don't blindly paste AI code either."

- *"If I can't mentally simulate it, I don't ship it."*

When they feel understood, resistance drops.

Consistency Rule

Don't oscillate between:

- *Philosophical macro talk*
- *Emotional hype*
- *Casual bro tone*
- *Corporate tone*

Pick one lane:

Calm, precise, slightly sharp.

2 Failures / Imperfections You Can Share

This is powerful with this audience.

Share things like:

- *"My first prompts were garbage."*
- *"I used to think AI was mid."*
- *"I copy-pasted once and broke my entire project."*
- *"I wasted weeks avoiding it."*
- *"I thought mastery meant doing everything manually."*

These are safe admissions.

They increase credibility, not reduce it.

Avoid:

Self-pity.

Over-dramatic vulnerability.

Therapy tone.

Just technical humility.

3 *How to Appear Happier / Warmer*

You don't need fake energy.

Instead:

- *Appreciate their intelligence.*
- *Validate their skepticism.*
- *Smile through writing (subtle humor).*
- *Avoid attacking them.*

Example tone shift:

Instead of:

"You're wrong about AI."

Say:

"I get why you think that. I thought the same."

Warmth = Respect.

4 *Show Competence Without Saying It*

Never say:

"I know this deeply."

"I'm an expert."

Instead:

- *Break things down clearly.*
- *Predict objections before they say them.*
- *Use clean mental models.*
- *Explain trade-offs neutrally.*

Competence = clarity under complexity.

When you say:

"AI shifts difficulty upward."

That signals depth without bragging.

5 *Humor & Stories*

Use:

Micro-stories from chats like that screenshot.

Example:

"I asked GPT to refactor my code once and it decided my variable naming system was wrong. I was offended for 3 minutes."

Relatable humor > stand-up comedy.

Also:

Play with metaphors.

"Programming languages are already abstraction layers. AI is just another wrapper. You're already living inside wrappers."

Light. Slight smirk energy.

6 *Reciprocity / Dope Free Value*

With this audience, free value must be:

Tactical.

Usable.

Intellectually satisfying.

Examples:

- *“Here’s how I structure prompts for multi-file projects.”*
- *“Here’s my 5-step architecture refinement loop.”*
- *“Here’s how to prevent AI from renaming your variables.”*
- *“Here’s how to inject project context properly.”*

Give them tools, not motivation.

They respect precision.

7 *More Attractive / Confident Marketing*

Confidence for this audience is:

- *Calm tone*
- *No begging*
- *No urgency manipulation*

- No “limited spots”
- No emotional guilt

Instead:

“If this resonates, cool. If not, keep building.”

That signals abundance.

Attractiveness = grounded certainty.

8 *Display Skill Without Arrogance*

Use demonstration.

Instead of:

“I use AI at a high level.”

Show:

Before prompt → generic output

After structured prompt → refined output

Explain why it worked.

Skill shown > skill claimed.

9 *Non-Needy Frame*

Never:

“Please join.”

“Don’t miss out.”

“You need this.”

Instead:

“If you’re serious about leverage, this is useful.”

“If not, keep grinding manually. No problem.”

Indifference increases authority.

10 *Cult Leader 5 Applied To This Audience*

Now the strategic layer.

DREAMS

Their dreams:

- *Become elite engineers*
- *Build insane projects*
- *Ship fast*
- *Get high-paying jobs*
- *Maintain intellectual superiority*
