

5. Problem Chains

[Music] Welcome to problem chains, the fifth module in the copyrighting 101 course. And I'm not kidding when I say that this is my favorite module in the entire course. This will change some of your guys' trajectory forever because what this module is going to do is it's going to take you from that like higher beginner up to intermediate advanced like CMO marketing wizard status. This module is so powerful that just by making this thing I had to change my entire funnel because I realized how powerful this stuff is and how much I was missing in leaving on the table. Like I am excited. I'm actually so excited that I'm back in the bathroom. We have OJ OG KJ for this video because I've been locked in my room grinding on this module because I just couldn't stop working on it. I couldn't even sleep the past two days. This one is freaking sick. So, what we're going to do in this module is we're going to cover the psychology behind problems and we're going to figure out how do we use problems to position our product and service, what we sell, as irresistible to our target audience. As always, disclaimer, I highly, highly recommend watching every previous module before this one because we're going to use we're going to use every single module we've talked about so far to kind of tie them together into this full marketing funnel strategy called problem chains. But you got to you got to know that stuff first or else this is going to be like Chinese to you. So go watch those. But with that out the way, let us dig into my favorite module in this entire course. This is this is gamechanging. I I can't say that enough. But you know what? Let's not say it. Let's just show it to you. Let's get right in. Starting with value creation. As you may know, the ultimate goal of entrepreneurship, what we're doing here is to create value for our customers by solving their problems. That value we create is exchanged for their value in the form of money. So before we get into this, you got to you got to rewire your brain. We're not trying to make money. You're trying to create value. And if you create value, you will receive the money. That's the whole point. And so everything you do, if you want more money, you better change that to say, I want to give more value. I want to provide more value. I'm pretty sure Dave Ramsey said it best when he said that money is just certificates of appreciation from happy customers, people who love your stuff. And so in order to get more money, we have to create value. So let's go over the value creation equation. Let me actually try to zoom in here if I can. There we go. So we start with pain. We discussed in last module that the origin of goals and all these things. It comes from pain. We have core desires that God has kind of pre-program into our human system. And we try to fulfill those desires, the core desires. And when when they're not fulfilled, it creates pain. And it's pretty simple. If someone's not in pain, they won't look for a problem that's causing the that could be causing the pain because there's no pain. So, if you don't feel like your leg is hurting or your foot is hurting, your ankle, are you going to go to the doctor to try to figure out what's wrong? No. Because nothing's hurting. There's no pain there. So, there's no pain. They're not going to look for a problem. The next step, problem. If they don't

5. Problem Chains

connect their pain to a problem, they'll never discover the solution you offer. So, let's say you go back to the doctor and your the pain in your foot is killing you, but they don't figure out what the problem is. You have no clue. Versus, let's say that they do help you figure out the problem. They say, "Oh, dude, you have a sprained ankle. You now need to get a ankle brace." If they didn't figure out the problem with your ankle, they wouldn't prescribe you the solution, the ankle brace. Next, if they don't believe that your solution is the best only solution to that problem, they'll never choose your solution to solve the problem. So, if if you don't believe that the ankle brace is actually going to fix your ankle, then you're never going to buy an ankle brace. It's simple as that. If you think that instead you should just take a bunch of pain pills and that should be the solution and just forget about it, then you're going to do that. So once they're in pain, you have to show them that that pain is because of this problem. And then how your solution is the perfect solution to that problem. And step 3.5 is decision. This is very very important. And a lot of people miss this and I I've missed it so many times in the past, but if they don't believe that they have to decide slash buy right now, they'll procrastinate on making the decision. So in our scenario, if they don't believe that their ankle is going to get worse and worse if they don't do something right now, they're probably going to put it off. Because I don't know about you, but those ankle braces and those knee sleeves, I used to play soccer in high school at a decent level and I tore my MCL and tore all this stuff. These things are like thousands of dollars to pay for these braces. It's crazy. And there's many times where my parents were like, "Well, if we can wait and see if this thing just heals on its own, we kind of would." But the doctor was like, "No, it's going to get worse." You don't want it to be so bad that you know he he suffers forever because of this one one mistake. So he had to buy right now. So you're aware of pain. You blame that pain on a problem. You then are shown the perfect solution to that problem, the thing that that they sell or whoever it sells. And then you have to decide right now. There needs to be a reason why you have to do it now and you can't wait. And so whenever someone waits and they aren't given a reason to buy now, what happens is they usually will find another problem to blame their pain on or they wait until the pain increases or they're first they're forced with urgency or scarcity at a later date. So let's just let's put this into the copy example. So, some of you guys know I like to be super transparent and just straightforward and we don't really do like salesy sales calls and none of that. It's just like if you want to buy Copy Lee, you buy it. And if you don't, I kind of just like I don't really care, you know? Now, while I do like that approach, I do like being transparent, honest, and stuff. There does need to be some sort of reason for someone to buy. Now, because what's happened in our experience is someone need like really needs this information that we sell in copy. They need the community. They need the systems, the outreach like methods, all this stuff. But because we just tell them, "Hey man, just, you know, do whatever. Take as long as you want. Go to side,

5. Problem Chains

they go about their day, they kind of forget about copyrighting and they find a different problem. So although they're sold that copy is the best solution to copywriting, if they start blaming their pain on not knowing drop shipping or high ticket sales, then they're never going to buy copy elite, even if it's the best solution for them because they've shifted to a different problem. Or option B is they go about their day, they keep seeing the win screenshots from all you guys like posting wins on my Instagram and the Discord and the pain grows and grows and grows. they come back and they purchase. So the pain increased more and more to the point where they had to buy. We talked about that last module or they're forced with urgency of scarcity at a later date. So if I'm like, hey, you know, there's only this many slots left in copy elite before we close it down for a long time. Now they're forced with urgency and scarcity at a later date and they have to do something. So that's kind of what happens. So do not forget this guys. This is huge. So, I I would hate for you to go through all the struggle of bringing awareness to their pain, showing them the problem that they have, showing them that your offer is the perfect solution to it, but just because you didn't give them a good reason to decide and buy now, the person just left, which is not good for them if you truly solve their problem. And it's not good for you because you don't receive the value in the form of money. And we have an entire module going over step 3.5. is actually the next module I'm pretty sure but just keep that in mind. Step four is effectiveness. So effectiveness is the amount of value created and this is determined by how well you solve the problem which gets rid of the pain or how well the person thinks your products and service solve the problem which alleviates their mental pain. And so we'll talk about this in a second, but you know, you have pain. You have pain you're in mentally and you have pain you're in physically and situationally. And if you change the way you think, it changes the way you perceive reality. We talked about this in in the beliefs course. And like, you know, you create the reality starting from your mind. And so you can technically not solve someone's problem, but you solve the way that they think about the problem and they perceive the problem as solved. uh it gets complicated, but we'll talk about that in a second. But basically, this is what it looks like. They have pain. That pain is blamed on a problem. They then search for solutions to that problem and then they decide whether to buy or not to buy the solution. Then the effectiveness is how well did it solve the problem and the value be value created. So let's say that you are let's take this super basic. Let's say that you're starving, you're hungry, you feel pain in your stomach, and you're like, I need food. That's the problem you want to solve. So, the solution would be someone has, you know, a hot dog stand and you decide to buy a hot dog. If they sold you a hot dog that was literally like pretty much air, like it wasn't actually real calories. It didn't it didn't have the calories in it, it would be ineffective. Therefore, you didn't actually create the value because you didn't solve the problem. In fact, you created misery for them because they traded you their

5. Problem Chains

value and you didn't hold up to it. This is the problem with online, you know, education, this whole space is like this happens a lot. People are sold on this thing and they think this is how valuable it's going to be. So, they pay a price which is a little less than that, but then the actual value of the the the course, the program, the coaching, whatever, is like a fraction. And so they feel like they got quote unquote scammed or they feel misled, which you know most of the times is, you know, it's kind of true. Um, but it's also all about expectations. We'll talk about that in a second as well. Yeah, this is what you want to understand is pain, problem, solution, decision, effectiveness, value created. Um, it's pretty simple when you get the hang of it, but that is kind of what we need to kind of get straight into the rest of this course. Now, as you move up the hierarchy of needs, the effectiveness of your solution gets more and more subjective. So, what I mean by this is what we talked about a second ago. It's easy to tell if someone's no longer hungry. So, the bottom tier of needs is very kind of simple. Food, shelter, water. Like, if you're thirsty, you get water. It quenches your thirst. Value created. But it's much harder as you move up the hierarchy of needs. So, it's much harder to know when you've achieved true fulfillment or purpose or you've raised your status or self-esteem. Like those things are not as quantifiable as like are you still hungry, you know? So, keep this in mind. It's a lot more subjective meaning that the value is much more about like perception and and how they view the product that they got. This is why packaging is so important. Think about the packaging that come that your iPhone comes in. This thing comes in like a beautiful sleek, minimal, professional feeling, expensive feeling box. And what does that do versus it just coming in like a a paper sack? It increases the perceived value of the thing you bought. You feel like you're getting your money's worth as soon as you open the box. So once again, just keep in mind that like it happens in the mind as well. Now, what I want to do is I want to go over some major breakthroughs around value. Um, I've not shared these with almost anyone because I've just been able to conceptualize them and make them useful, but I'm telling you, most beginner entrepreneurs stay stuck in place for years until they get this. Like, these these held me back for actual years. So, just by you listening to this, it's going to break a lot of chains for some of you guys and help you break through some plateaus. Breakthrough number one, selling your audience on the problem, then your solution has to happen first before the value is created. There were many times in my early years of entrepreneurship when I had life-changing products, life-changing frameworks and advice that whenever I launched my product or whenever I shared my free advice on YouTube, I got nothing. no sales, no views, etc. So, my life-changing advice changed no one's life. But in the past year, there's been multiple times where I I've sold my audience first on that exact same advice before giving it to them. And this time, that advice, that same advice changed hundreds, if not thousands of lives. So, think about what I did at the very start of this module. Think about the

5. Problem Chains

difference if I would have just started going straight through this module or if I told you how important this module was to not only my success but your success and how crazy this stuff is. I made it feel big, important, valuable. That way you pay attention to the module and you use it and it truly becomes valuable. So again, this isn't this isn't lying. This isn't like um this isn't misleading people. It's simply leading them to realize the true value of something. There's a verse in the Bible and um it talks about like don't don't cast your pearls before a swine. Meaning like don't you know give this valuable stuff to people who don't recognize that value. Um, and that's not like a direct, you know, that's like KJ a bridge version, but it kind of goes along the same principles like if some if someone doesn't know your stuff is valuable, then why would they stick around to try it and test it out? You have to sell them first. So that brings me to the next point. Then I started to think, well, you know, if I just build it, they will come. But what I'm starting to realize is that the saying build it and they will come only applies if you have something truly extraordinary. I mean like best in the world. It has to be it has to be like the best. And to build something that good takes at least a decade at least. And close to 100 times more effort than we think. And to spend a decade on something, what what do you need? You need money to survive while you build that thing, which requires you to sell in the meantime. So, there's really no way around it. You have to learn how to quote unquote sell. It's not a bad thing. In fact, selling is the first step. For products and services that require substantial effort from the customer to get results, the sales process is the first step to real value being created. If you're selling something where someone else has to do part of the work that they've got to put in their effort, the best thing you can do is to really sell them on the front end so that they believe that they can do it. I learned this the hard way with Copy Lee is when the people who I'd really spend time breaking their false beliefs on sales calls and making sure that they were fully ready and all bought in and they paid a lot upfront. Those people got results because they did the actions because they believed in the mechanism. They believed in themselves versus when the price of copy elite used to be like very cheap. I was charging monthly. I got a lot of people who were not serious who didn't believe in themselves and didn't really believe in copyrighting. and they were just kind of messing around and it was misery for everyone because they weren't serious. They just wanted me to do all the work for them and they didn't get results because they weren't bought in. It's the same product, same information and one person succeeds like crazy, makes, you know, six figures a year. Shout out to Jason. And someone else doesn't make any money. Same product. What's the difference? One person was sold on the meth on the method. They were sold on themselves and they paid a lot up front. So they were putting they're basically like showing their belief by putting up money at stake and they got the results. They took action. So another example um if you're coaching someone through a weight loss journey, the more false beliefs that you break during the

5. Problem Chains

sales process, meaning the more sold they are on your methods and their abilities to do those methods, the more likely they are to put in the work on their end, which creates the results, the value. Also, I learn I learned this the hard way with the free Discord back in the day. So, way back when I first started, I wanted to help everybody for free. And I started a free Discord and thousands of people were joining. The issue was those people didn't really care and they weren't they weren't bought in. And so, because they paid no money, I was losing my mind trying to coach people who didn't actually care. They just wanted me to do the work for them and they were just kind of there for a good time. And then it was magical when I started selling copy elite high ticket. All of a sudden I got people who were fully bought in. Their beliefs were like perfectly in line. They paid money up front and they they got results. They took the same information I was giving people for free who just, you know, pissed it away and they actually took it seriously and got insane results. Um, so yeah, selling is vital and it's part of value creation. So, I want you guys to stop seeing selling as different from the value being created and start seeing it as one and the same. Selling is just the first step to creating that value. Disclaimer, I don't mean selling by saying a bunch of claims that are not true and are misleading. That's not what I'm saying. This the reason that why selling gets a bad rep is because people confuse selling with lying. Not the same. I simply mean helping your audience break their false beliefs and show them what's really possible with your stuff so they can go win with it. Cool. Breakthrough number two, value is created in the mind and depends on which core desire or desires the person or audience is currently trying to achieve. So the saying beauty is in the eye of the beholder and um it's true. We'll talk about some concrete examples but also there's no universal set value for a product or service. Every single product and every single service has a different value for every single individual on earth. This big day, this drink u shout out to Iman is extremely valuable to me. Don't tell him this, but I would pay two to three times just to make sure I keep drinking these because it solves a lot of problems in my life. I get the perfect amount of caffeine, not too much. It's only 80 milligrams. Um, this is going to sound like a sales pitch, but I'm not affiliated with this at all, but I do want to be. So, Iman, hit your boy up. I get 80 milligrams of caffeine. I There's no artificial sweetener, so it doesn't mess up my gut my microbiome. There's no actual sugar, so I don't get like a a sugar rush or blood sugar spike. And it has electrolytes, so it hydrates me and it tastes decent. I love the taste. So, this helps me work every single morning. It's It's solved a lot of my gut issues because I stopped drinking so much coffee and I feel great. So, I would pay a lot for this. But someone else who doesn't have those problems and doesn't really care and is happy drinking coffee, they're not going to pay as much. And so, value is relative and it depends on which core desire, which problems you're trying to solve. Value is relative. So some concrete examples. If you tried to sell a famous Picasso painting in a remote African tribe marketplace, the best you'd

5. Problem Chains

probably get for it is a few pieces of fruit or if you're lucky, maybe a couple of bowls. But you certainly wouldn't get the \$50 million price tag that this same painting would fetch in New York City. And that's because the relativity of value is determined by which core desire a person is trying to achieve in the hierarchy of needs. So if you were dying of thirst in a desert for a week, you don't give a freak about this painting. What do you want? Water. But if you've solved all your needs, you have as much food and money and clothing as time as you want, then you care more about your status or you know personal achievement or fulfillment. And so you don't mind spending \$50 million on a painting because what else you can do with the money and your friends think it's cool. You want to be cool to your friends, your other rich friends. And so the painting is worth 50 million to you. But to that African person who cares more about building their home and shelter and food, they don't give a freak about the painting. They don't care. It's all about the hierarchy of needs. Which core desire is the person trying to solve? Now, like I said, if you were dying of thirst in the desert for a week and someone had a gallon of water, but you had to pay every dollar in your bank account for that water, you would do it in an instant. Why? Because you don't want to die. You're better off paying all your money than dying. And so depending on which level go, you know, make sure you go watch the pain and confidence module. The level decides the value of what you're selling. Like this is crazy. Crazy. Another example. If someone is trying to solve the bottom tiers of core desire, meaning they're starving, they need shelter, they're endangered, they couldn't give a freick about a Lamborghini. They couldn't care less about getting their picture taken with Tom Brady. Or they couldn't care less about buying your Looks Maxing course. The brothers over there in Africa do not care about your jawline course. They're worried about making a living in shelter and food. Next, if someone is trying to solve the middle tiers of core desire, meaning they have low status, they don't have community, they don't have sexual companionship, they don't have time freedom, but they have the, you know, food, water, and shelter, then they don't care about food, water, and shelter because they've already solved those problems. But they'll also be less interested in true fulfillment and you know esteem and all this uh you enlightenment because they don't have the middle tiers of the desires. Chances are they'll be locked in on chasing the bag. Like they're worried about getting a girlfriend, not you know changing the changing the world. They just want a girlfriend. And so it's all about the core desires that determines the value of what you sell. Lastly, if someone has more money and more time and they have, you know, sexual companionship, they have family, whatever, they don't care about your get a bag 101 course, your drop shipping course. They'll be more interested in things like enlightenment, self-actualization, purpose, legacy, maximizing their status, their reputation. And this is exactly why a Picasso painting is worth millions in New York City and not remote tribes in Africa. Another concrete example that I

5. Problem Chains

thought was funny is there's a rapper that I loved growing up. His name is Big Sean. And when he first started rapping, he would literally be outside. There's a story of him like approaching Kanye on the street and begging and walking with Kanye as he raps to him, trying to sell him on how good he was that he could get signed. He was trying to make it out the hood. But now Big Sean raps about hilarious things like he he raps about holistic health and you know empowerment. He talks about crystals and meditation. So old, you know, high school 20-year-old like trying to get a bag, make it out the hood. Big Sean was rapping about completely different problems versus the Big Sean who's like multi-millionaire, has all those things covered and now he's trying to work on enlightenment and like you know crystals and meditation and all that stuff. So it's all about which problem are you trying to solve in the hierarchy of needs. Now important disclaimer it's not to say that this is like a direct level up. So you could be like once you have the once you have the the basic needs covered. So levels one and two. So like physiological needs and like fear from danger and you you have shelter. The ones after that get a bit more like you can change the order around. So you could you could still have like quote unquote not a whole lot of money but be worried about fulfillment. I mean that's that's me for example. Like I don't have a lot of money guys compared to these people who have billions and billions of dollars. But I have enough money where it's I I don't feel like I'm trying to compete for status and stuff as much anymore. Obviously, I'm I'm still like a sinful human being and in need of Jesus every day, but I'm constantly kind of shedding that sinful nature of trying to compete and have status. And I'm working more on like changing the world and telling people about Jesus and giving away stuff like this that's life-changing for other people and working on fulfillment and legacy stuff like that. So just don't like just know that it doesn't go directly up in order, but the bottom two usually go in order. So it's like, you know, you got to got to not be starving, got to have shelter, and then you start worrying about like, you know, love, belonging, status, all those things could be interchangeable. And the top one is usually kind of last once the other ones are covered usually. So fulfillment um of purpose, self-actualization, stuff like that. All right, breakthrough number three. This is Oh, this is so important, guys. All these breakthroughs are massive. Like this, you should you should be having like epiphanies um every five minutes right now. Breakthrough number three, what you sell doesn't have to be worth a million bucks. It just has to be worth more slash more valuable to the person who bought it than the money or price they paid for it. So, you don't have to sell a million-dollar energy drink. You just have to sell an energy drink that is more valuable than the price you charged. And so, like I said earlier, this big day, I would honestly pay like I don't know 5 to \$10 a day for this thing really because it's worth that much and the money is less worth it than that. But, you know, it's it's probably like \$3 or something a day and when you when you calculated it out. So, it's worth it to me. Let's say it's worth six bucks to me every day.

5. Problem Chains

That's how that's the maximum I would pay for this thing is \$6. But right now, it's only \$3. I'm still getting it's still profitable for me value-wise, but like I said earlier, you can't forget value is relative. And so someone who's just like thirsty and they they just need like water, they don't care about this. They're not going to pay six bucks for a small thing of water. They're just going to go drink water out of the tap for like 25 cents. So it's all about the problems you're trying to solve. That's what determines the value. This is also why selling stuff to rich people is is overpowered. So, a couple of reasons. One, since they have more money, each dollar is worth less to them. Money isn't scarce. So, if you only have a hundred bucks, this this \$5 big day is a hit every day. Like, you're going to go broke in a couple weeks. But, if you have \$100,000, you don't really care. The money doesn't matter as much to you because it's less scarce. Next, they are more likely to be focused on the higher tier core desires, which are unironically less solvable by money. So, what I mean is like having a billion dollars doesn't mean you're automatically fulfilled in life. We've seen this a ton of times. Think about how many rich and famous people um you know, end in end their game early on their own decisions. You know what I'm saying? I can't say it. I don't want to put on the video, but you know what I'm saying. How many rich people who are rich, they famous, they quote unquote have everything that we think of by society terms, but they decide to turn the game off early. So, you've heard the saying before probably, money solves money problems, but money doesn't solve everything. And so, what it means by money problems is usually those those bottom tiers of the the needs. And so if you're selling to rich people, they don't care as much about money because they know that the money is not going to like inherently solve their problems. And so they're willing to pay a higher price. Um the money is less valuable to them. So once again, it's about solving problems. And so if the problems that they're trying to solve can't really be solved by money, that means that that money is less valuable to them. They're more willing to just trade it for something else that can actually solve their problems. Um, and the key thing to note here, it's all about expectations and which level of life they're trying to beat. So, this one analogy will change the way you see business, especially in the online space. I want you to view life as video game levels. So that hierarchy of needs chart we went over in last module, view it as each levels in the video game. Now obviously it gets way more granular than that and that's what this whole module is about like the problem chains and all the problems you go through to solve just one level. But just imagine that each thing is a level. And so if if someone is stuck on level one, selling them the cheat codes or the the the quest guide to level five doesn't help them right now. they can't be level one and so they don't have a use for the level five cheat codes yet. Therefore, they're not as valuable. But to someone who's stuck on level five and they cannot beat it, they've been stuck on it for years and the pain is building up and they just they want to pass this level. If you sell them the cheat codes to level five, it's

5. Problem Chains

extremely valuable. Are you guys getting this? This is crazy. Crazy. So what I mean is is you can sell the same online course, the same course to two different people for the same price and one of them can find it extremely valuable based on the problem they're solving while the other one can believe it wasn't valuable at all. Guys, this almost drove me insane because what would happen inside of Copy Elite is I would have guys who would literally tell me that this program changed the trajectory of not just their life but their entire family lineage. I'm not making this up. Like people have said this to me, real customers, real results. But to be transparent, there's multiple people in the past who've told me that this thing wasn't valuable at all. Do you know how nuts that makes it? that makes like me feel. And obviously like there's going to be people who are just doooo-oo heads. Like you don't don't don't um don't discount the hater rate. There's always going to be a percentage people who just like hate everything. Life is miserable and they're going to take it out on you. That's not what I mean here. I mean the people who genuinely like wanted to be here and they're good people, but they didn't think it was valuable. Why? Why is this? This drove me insane for months. But it's because they they sold themselves or they got sold on by our sales rep or like they just misread the marketing in my videos. They sold themselves on this program which is like a level two, level three program when they hadn't even beaten level one. So these people hadn't even decided they wanted to be entrepreneurs. They hadn't even fully committed to this path. And so if you're not fully committed to this path of making money online and like truly changing the trajectory of your life and your family's life, then you're not ready for this program because it's not easy. Like it's tough. I mean, just watching this module is going to take you an hour and a half, two hours. So if you're not willing to sit through a two-hour thing, like there's no just no way you win. There's no way no way you win entrepreneurship if you can't watch two hours or the eight hour course. You just can't do it. And so by selling people who aren't ready for this level's cheat codes, it created like quote unquote like phantom value misery for me and them. And so I had to swap the way I was doing everything. I started like treating copy lead as like application. Like you got to apply for it and we want to make sure that you're bought in and you're going to get results. And that changed everything. We've had like dude I I I think I don't know for sure, but like our our refund rate request is lower like ethically lower than any ones I've ever seen. Um, ethically there's people who use like tactics to get around that, but like literally ethically it's insane. And yes, it's because I care about the product. I'm not discounting that. But it's also because I don't care to sell everyone on this just to make money. I only want the people who need this thing to buy it. That's the difference. This is why this is why selling intangibles like info and selling coaching and selling courses gets such a bad rep. This is why people think it's a scam. It's not because the information is a scam. Now, granted, there are courses out there that are freaking terrible. And to to you guys selling those,

5. Problem Chains

like, please step it up. please just put some care into the market. But to the people who do have like a decent program and it's good and it and it does get results for other people, the reason why people call it a scam is because they were not at the level where they needed that info. So because they weren't at that level, they saw it as not valuable versus if they were on that level and they wanted to solve this problem, they had the motivation, they were ready, it would be insanely valuable. So this is also why like selling to more aware people, selling to more advanced people, selling B2B, like it it honestly is better in the long term as far as like when you're just trying to keep it simple. But I do believe selling to B TOC creates more impact, which is why I do this. There's there's a reason I go through all this pain instead of just transitioning to like a consulting for B2B. It's because I I love you guys. I love my younger self. I love the people who want to just get in this online game, learn learn the true fundamentals and make money. That's why I do it. It's not because of the money. It's because of the love and servitude. And so this is a huge realization for me. And if you're going to sell info, you're going to sell products online, you got to understand this for you or your clients. So what happens? Well, you know, people make claims on the front end. They charge huge prices based on like you you've seen it before, right? Make 5K, 10K a month, guaranteed. Guaranteed. It's going to happen. They charge huge prices based on those claims, but then their product or service doesn't live up to the claims and the price charged. Once again, most of the times the product is bad. But even in scenarios where the product is phenomenal, it doesn't live live up to the claims because the people you sold on it weren't ready for it. And so just because one person in your program made 10K a month doesn't mean that you should automatically start blasting make 10K a month in the next three months because will everyone who goes through your program do that? No. Not unless you're being very selective with who joins and most people aren't. That's why the space is freaked right now and that's why I'm trying to change it with with some some major moves coming up. Um, but offer owners sell their products and service to anyone and everyone possible because oh, I know my stuff is valuable. Failing to realize that it's only valuable to someone at a specific stage where they then need the info being sold. So once again, the level three cheat codes are the most valuable to someone who for the life of them can't beat level three. That's it. You guys getting this? I hope so because this like this is some major breakthroughs. I feel like no one even talks about this. Maybe I'm just going nuts. I could be. I mean, I'm back in the bathroom. Things are getting crazy. But what I want to do is I want to make this so concrete. Like I want to make this like just stick in your head. You won't forget it. Okay. Real world example here. If you sell a brand new MacBook Pro, something we'd all consider to be extremely valuable, like right if someone gave you a MacBook Pro, you'd be like, "Dude, I love you. I'm gonna name my first kid after you." If it was a MacBook Air, I'd name my second kid after you. But since it's a MacBook Pro, you're

5. Problem Chains

getting the first born. Um, anyways, we we'd all consider that to be extremely valuable. But if you sold this MacBook Pro in a remote African tribe who doesn't have internet and they don't have electricity, this MacBook is barely worth anything to them. Why? Because it doesn't solve any of the problems they're currently facing. It's not even a good paper weight. I can't even make that joke. Because they don't have paper. Does that mean the MacBook Pro was a scam? Is the product terrible? No. the product is fine. You just sold it to someone who isn't currently trying to solve the problems that a MacBook Pro solves and they don't have the resources that make the MacBook Pro valuable. And so as so society progresses, you know, this this MacBook only works because I have electricity, I have internet connection, there I have processing chips, I have, you know, plastic and metals and all like it only works because all those things, all those technologies were built before it. The MacBook Pro sits on this massive, you know, bank of of other technology. That's what people aren't understanding with info. If you sell this this course that like yeah you think it's good but someone doesn't even have the right mindset. They don't they don't understand how to think. They don't understand they have all these false beliefs. Then brother it doesn't matter that they can't use the MacBook Pro because they don't have electricity. They don't have internet. The internet has been turned on in their brain. Therefore your course is not valuable. Is it a scam? No. You just sold the wrong person. This is so important. and um because I'm losing losing my voice. This is the problem with the online space right now. This is the problem. So, what I want you to do is focus on selling the cheat codes to people who are stuck on that current level that your cheat codes work for. If there aren't many people on that level, make free slashlowerpric stuff that helps them beat the earlier levels and reach the level where they need your main offer. So, this is like this is the thesis of my strategy going forward is I'm going to give away free stuff, free courses that is better than what I consider anyone has ever given out in the niches that I'm in. Why? Because I don't want to deal with people who aren't ready for the stuff that I sell. And so instead, I'm just going to educate the people and see the people who should be in this lane. Give them give them the stuff that normal people would pay for. I'm give it to them for free. That way, the people who aren't ready can just drop off before they ever pay anything. So, I get to work with the highest quality individuals. They get extreme value because they're they're ready for the exact thing that I that I sell. It's just amazing. It's amazing. This is also why organic YouTube works so well. This is why it works is because most of the times people get educated and you filter out people who are un like who aren't ready, who don't want this bad enough before they hit your sales process. Think about Russell Brunson with ClickFunnels. So instead of trying to push Clickfunnels on everyone, what he did is he wrote a book explaining funnels and how they can help your business. And that book filtered out people who weren't like if people bought the book for 20 bucks and they

5. Problem Chains

read it, they weren't serious. They didn't move on to ClickFunnels. But the people who were educated, who went through the whole book and they were now ready to make money using the funnel software, they receive the funnel software. So he if he made everyone pay \$100 a month who doesn't have a business, who doesn't know about funnels, who doesn't know any marketing, they might call it a scam or say it's not worth it. But if he if he teaches funnels, if he teaches marketing, if he teaches entrepreneurship concepts, and then he sells on ClickFunnels, it's now extremely valuable. Clickfunnels has gotten thousands of dollars out of me over the past two years because they're helping me make a lot more because I read his book. So crazy concepts. All right, I'm going to get some water, then we'll continue on with with pain buckets. We'll get into the real meat of this module. All right, moving on to pain buckets. So, as we discussed in the previous module, you know, our job as copywriters is to create pain and then blame that pain on a specific problem that your product and solution solves. And so once again, if someone's having foot pain and the doctor says, "Oh, that's because you need an ankle brace." They blame that pain on a problem and now guess what? You want to go shopping for ankle braces. Or the doctor could have said, "Hey, that pain is because you're not stretching your your hamstring and you need you need to roll out your hamstrings." So then what do you do? you search for a foam roller. So the same pain can create different desires um to solve the different problems. And so what you have to do is you have to attach the pain to the problem that your product and service solves. So we'll go over this in a second. [Music] And the more pain that you associate with that problem, the more pressure you feel to take action to solve that problem. So here's a cool little diagram. You create pain. You attach that pain to a problem. So you fill up the problem bucket. And now they have a desire to solve that problem because they blame that pain on the problem. The problem is housing all that pain. So examples from my life in middle school. I couldn't get girls. So the core desire there, right? Sexual companionship, love, belonging. I couldn't get girls and I thought the problem was because I had acne. So that pain created by not having a girlfriend, I attached it to having acne. That was the problem. And so as the pain grew, I became more willing to do anything to get rid of my acne. So I would buy all these special like facial washes. I would buy this expensive like medicine cream. I would take these pills. I would do whatever it takes to get rid of the acne. So I spent a lot of money trying to solve that problem. But if I thought that I was ugly because of my hair, I would have spent money on a haircut and hair gel and hair supplements instead of the acne stuff. And so the same pain caused me to buy um could cause you to buy completely different things. So sorry guys, yelling for two hours like makes your voice just dead. I'll try to tone it down. Um, in ninth grade I wanted so badly to join a famous trickshotting team like Faze or Soar or Dare or Bay etc. And this is because of status, respect, belonging. So when I was in middle school, the coolest thing you could do

5. Problem Chains

was be in a trickshotting team. Everyone played Call of Duty. Your status was associated with like how good of a team you were in. And so I wanted that status by joining the team. And so to join those teams, I need to do what? I had to hit insane clips in Black Ops 2 in the game. So as the pain grew of wanting to join a team to get status, I started buying anything I could to help solve the problem. So I bought a brand new Scuf controller. I bought control freaks, which is like the little like stick extenders that go on the thumb sticks. I bought a better Xbox that had less lag. I did whatever it took to hit clips. So because I attached the pain of not being in like a team and I had to hit clips to get in the team, I had the desire to solve that problem. I spent money on it. Two years ago, I wanted more than ever to make money online. The core desire being freedom, status, purpose, fulfillment. But every business I started failed. And so I was looking for anything to change that. I was looking for a problem to blame that pain on. I started to notice people talking about copyrightiting. As I watched more videos and learned more about copyrightiting, I realized basically like I sold myself on how important copyrightiting was to every aspect of business. I started to blame all the pain of failed businesses on just not knowing copyrightiting. So the more broke I was, the more the more times my business failed, the more I felt like I got to learn copyrightiting. And so as the pain grew, I did whatever it took to learn this skill. I bought courses. I wrote read books. I practice writing daily for hours. I studied videos for hours. And the rest is history. So thankfully I came across this problem because man it is very very important. But for every problem that you've tried to solve in your life, at some point you blamed the deep pain that you feel on that problem which led you trying to solve it. I want you to think about anything in your life. Literally any problem you've ever tried to solve. Think about what led you to put your pain on that problem. Think about it. Some of them are obvious. Some are less obvious. So the acne one is pretty obvious. you look at your face and you're like, "Wow, I don't like how I I don't like how that looks, so other people must not like me because of how it looks." Pretty simple like logical problem chain there. But other stuff can be more complicated. Um like why you buy like why I bought this expensive microphone like it gets deep. So, I want freedom, status, and fulfillment, and purpose. To do that, I need to make videos and learn how to teach. But in order for people to actually stick around for my videos, I need to have clean audio because that increases the watch time because it's easier on their ears. Like, it can get deeper and deeper. So, but think about every single time you've ever bought something, this has happened. You felt pain, you saw a problem, you bought something to solve the problem. Once again, the value value creation, right? Pain, problem, solution. Did it work? Value created. So, um, going back to our thing here, your job as a copyriter is to attach as much pain as possible to the specific problem or mechanism that your product or solution solves. So, if I sell a speaking course, I would show my audience how every pain in their life is because they don't know how to speak. Can't get girls.

5. Problem Chains

If you knew how to speak, you could. Can't get views. If you knew how to speak, you could. Can't get a job. If you knew how to speak, you could. Don't have friends. People always interrupting you. If you knew how to speak, you this wouldn't happen. So notice how I'm not telling them to, oh, you can't get girls, buy my speaking course. I'm saying if you can't get girls, learn speaking. There's no price tag attached to the mechanism. And so they want to believe it. And it makes sense. Then they think, well, how do I learn speaking? And that's when you tell them about the course. It has to go in this order. Pain, problem, solution. Sorry, guys, my voice is cooked, man. Uh, you can't leave likes on this on these modules, but if you could leave a like, leave a like for my voice. Rest in peace. All right. Now, it's important to notice that the exact same pain points could be blamed on a completely different problem. This is why copywriting is essential. You have to know this skill because your product is not just competing against your your niche competitors. your products and service is competing against every other possible solution to the same pain points. So if someone feels unattractive, your weight loss program isn't just competing with other weight loss programs, it's competing with hair and makeup and clothes. And you've got to show them why the only answer, the only real problem in their life to being unattractive is their physique. You got to show them how the clothes won't change because they can see like people can see how your clothes fit on you. So, the physique is the issue. You see what I'm saying? You don't you can't just show why you have the best clothing. You have to show why clothing or I mean uh the best fitness program. You have to show why the fitness program is the answer to the core desire. This is why it's so important. So important. This is why people like Iman who understand this to a very very deep level that he doesn't show on YouTube are the ones making hundreds of millions of dollars is because they're not just competing against other online courses. He's helping his audience realize that everything they want in their life is tied to them buying his course. That's the secret. So you must show them why the problem you solve is the true source of their pain, nothing else. So another example is if I sold fitness coaching, I'd show my audience how every pain in their life is because they don't have a attractive physique. Notice the same pain point. Can't get girls, can't get views, can't get a job. If you had a strong, attractive body, you could. Don't have friends. If you had attractive body, you would. You'd be more confident. So notice how same pain points but different problem which leads to selling a different solution. It's crazy. It's crazy. And as discussed in the last module, when the pain of doing nothing becomes unbearable, people do something. They take action. They tip the bucket. So if you create more and more and more pain and you attach it to the same problem, it it it begins to fill up this bucket and they have no choice but to do something. They want to empty the bucket. They want to buy a solution. They want to buy your course. They want to buy your your product, your whatever it is, your service. When the pain when the pain attached to that specific

5. Problem Chains

problem gets unbearable, they have to try to solve it. Crazy. Crazy. Let's grab some water. Unique mechanisms. Things are about to get fun. A unique mechanism is a specific intriguing name for the problem that your solution solves. So by using effective unique mechanisms in your marketing, it creates curiosity, intrigue. It creates new and only emotion. So if they've never heard it before, it sounds new. If they only heard it from you, they can only get the solution from you. If it's also going to create a big FOMO emotion. So, by having something that's unique, it's curious, it's intriguing, it has like some energy to it, it creates kind of FOMO to to get in on it, to figure out what's going on. The problem is most people do these wrong. I'll show you example in a second, but effective unique mechanisms are specific. They're unique to you. They're casual, and they're simple. So, it's this beautiful elegance of it. It's curious, but it's also familiar. It's new, but also familiar. This is a big like thing in in the world of products and aesthetics is like the new the new and familiar balance. If you have something new, you got to make it feel familiar. If you have something familiar, you got to make it feel new. The balance is what makes people intriguing. They want to they want to they like that stuff. Um, yeah. And so it needs to sound specific and unique, but also be casual and simple enough where they understand it and just make sense logic logically. And whenever you do this wrong, it comes across as salesy and inauthentic. You sound like a snake oil salesman. So here's a personal example. One of the mechanisms that I use, a unique mechanism to me is high value outreach. Before I popped on the scene on YouTube, I didn't know anyone using this word. No one. I created it. Now, are there other people who do high value outreach in the real world? Like, yeah, but they're not selling the concept. They're not teaching it. They're not they haven't coined the name. And so, by doing that, it sounds what specific. It's unique, but it's also simple. You understand kind of what it means immediately, but you you don't know how to do it. It creates intrigue versus if I would have named it KJ's four-step magic bullet outreach trick. This is the problem with a lot of people's offers is their unique mechanisms and their process sounds like this. KJ's fourstep magic bullet out trick. It sounds like it sounds like you're at a children's magic show or something or I don't even know. You know what I'm saying? It doesn't It sounds sy. It sounds weird. It doesn't sound really intriguing at all. It sounds like you're using like just corny curiosity. Now warning is these variables how specific, how unique, how casual, how simple, those are not universal. It's determined on the specific conditions. And so what sounds unique to one audience could sound boring to another one. What sounds simple to one audience might be too complex to another one. Also, audiences and markets evolve and become more aware over time. I'm going have to start talking really quiet to make it through this. I'm going to I'm going to have to whisper, but always keep the specific conditions of your audience in mind. Always. Let's go over some examples of successful unique mechanisms. Kino Body, very famous example from like the

5. Problem Chains

2010s is intermittent fasting. No one was talking about intermittent fasting when he was talking about it. It was a very esoteric niche thing, but he brought it to the forefront and he sold his weight loss programs that were based around this idea of intermittent fasting and how it burns fat while you gain muscle and you curb hunger, all these benefits. Iman used SMMA to sell the agency model. So, obviously, this one is like for people like us, for our specific conditions, this is overused. SMA agencies like it doesn't sound new. It's not unique. It's not specific. Everyone's talking about it, but back then SMMA was just it was Iman. He was the only person really selling it and teaching it. P90X in the early 2000s. I did P90X as a kid. They sold muscle confusion as a unique mechanism. And so they explained how in order to keep your muscles growing continuously, you had to confuse them and always do new stuff so that they grow. It sounds pretty like it sounds unique. is interesting, specific and it sold millions bulletproof coffee. They made MCT oil or brain octane oil famous to sell their coffee. So they created this recipe of coffee that includes this special brain oil and that sold their coffee more. Clickfunnels Russell Brunson coined the idea of funnels to explain it's this one's beautiful, right? It's so simple. It makes sense. It doesn't even sound like a unique mechanism. It just sounds like a word that people get. But by using funnels to explain websites and making money through websites, it was a brand new opportunity. And so people paid a lot of money for his funnel builder, which is essentially just a pretty crappy website builder with less features. But because it was angled around the funnel concept and it focused on making money, it it made this it made him rich. Another one, a really good example is true classic TE's. And so you might think, well, KJ, how do you use unique mechanisms when you're selling a crazy oversaturated product like like a t-shirt? This is mastery. This is mastery, guys. These guys figured out how to make millions selling plain white t-shirts. Can you think of anything more saturated and more like commodity than that? But they did it. Why? Simple unique mechanisms by using muscle fit shirts. So basically shirts that focus on the fit, not the style. Shirts that are tight around the chest and arms, loose around the waist to sell their t-shirts. And you can check out this incredible advertisement which is so good. It's so simple where they just literally focus on the the unique mechanism. That's it. They don't really talk about their t-shirts. They just say, "Look, there's a guy who's sad because he looks out of shape and they say, "Dude, it's not you. It's the t-shirt." Using a t-shirt that fits you tied up here and looser on the waist. And then he's like, "Oh, now I look great." It's so simple, but it made millions. This is the mastery of unique mechanisms. So once again, it all depends on specific conditions which can change over a long enough time. So back in 2020, selling SMA, selling drop shipping was unique. It was shiny. It was exciting. But now in 2025, those same unique mechanisms are no longer unique. They're falling flat. So people are using new mechanisms to sell the same model. So growth operating, IPGA, etc. I don't want to break it to you, but

5. Problem Chains

they're just agencies. It's the same agency model. but they work more. Why? Because once again, it's all about belief. If you believe you can make growth operating work, but you don't believe you can make SMA work, you're right. This will work for you. It is more valuable. And so, this is why unique mechanisms are so important to creating value is like you got to create hope and inspiration. Um, and I I don't want you to fall in the trap of thinking it has to be some crazy complex scientific sounding thing. It doesn't. It could just be a logical angle that sounds unique and exciting. The true classic TE's muscle fit shirts. So simple. Now, I just want to say learning to create these takes a lot of practice. It takes iteration. It takes taste. Creating compelling unique mechanisms could be one of the biggest levers that you pull in your marketing. Like think about it. One perfect unique mechanism created millions of dollars, maybe even like hundreds of millions, I don't know, tens of millions of dollars at least by selling white t-shirts. Now, obviously there's a lot of work going around it, but like it's the core of of your sales message is the unique mechanism. So, we'll go over examples, but just know that it takes time. Keep practicing, keep learning. Do not get discouraged. You should not be able to watch this module and go print the best unique mechanisms. It's going to take time. But now that you're aware of it, now that you know how it works, you can start to see it and learn it. And then then you can go get good at it and make money. So, now sub mechanisms. This is where um things get even spicier. So submechanisms are unique mechanisms within your main mechanism that solve the micro problems involved in the process of getting their desired result. Now that sounds a little bit complicated, but I promise it'll make a lot of sense in a second. But the reason we come up with sub mechanisms is to destroy limiting beliefs that your audience has around the problem opportunity mechanism that you're selling. So, for example, um if you're going to sell the mechanism of intermittent fasting immediately, what are the false beliefs that come up? What is every reason why you wouldn't want to do intermittent fasting? You'd be like, "Oh, well, I'm hungry or I couldn't eat too much during the actual window or um my blood sugar would drop too low." Like, all those things. And so now you got to come up with other sub mechanisms to address those false beliefs. Um and we'll talk about this a little bit. This is not a me a necessary thing but it could be extremely extremely powerful. Let me give you an example. So when I was selling copyrightiting as the unique mechanism. So like when I was targeting like an unaware audience and making them aware of copyrightiting um one of the biggest fears and problems around copyrightiting is doing outreach. So what did I do? I created the sub mechanism highv value outreach to give hope and explain how you can get clients easily through the systems in copy elite. And now that we have so many client competitions and I place people with clients and their job board is there like most people who sign clients aren't even doing outreach, we've kind of like completely eradicated that problem as long as you get good at the skill. And so soon I'm

5. Problem Chains

going to have a new mechanism called like you know arbitrage like whatever placement you know client placement or some kind of new unique mechanism. I got to think about it to explain how you don't even have to do outreach if you get good enough. we'll just place you with the network of people that we have who need copywriters because there's a massive need. A lot of people think that copywriting is saturated because like, oh, no one can get a client. It's not because the need isn't there. The need is growing exponentially. People keep asking for clients. And we had one guy who ran a client competition last week and he hired four riders at one time. I mean, what the heck? Like, people need good writers. The problem is they don't need bad writers and everyone's bad. No one knows this stuff and so they're not good and uh no one no one pays them. So yeah, pretty crazy. Uh so by creating highv value outreach, what I did was I gave hope to people and now they thought, "Oh wow, I can I can actually win with copywriting now because outreach is covered. I have high value outreach." It also explains why their past attempts to do copywriting didn't work. So the mechanism inherently like whenever you hear high value uh highv value outreach you immediately think well frick I've been doing a lot of low lowv value outreach that's why I don't have clients but if I start doing high value outreach I can get clients versus if you didn't have a mechanism and you just said oh we'll help you get clients they think that you're probably going to give them the same thing everybody else has given them the same stuff they've already tried that doesn't work and so they don't believe your solution or your your problem will be solved and they don't buy your solution. So these sub mechanisms are so so powerful and if you really think about it every single mechanism is a sub mechanism like it's not like same thing with problems like you have like the big problem like it stems from the core desire then every problem could be a micro problem or a macro problem. So like if your main mechanism is copywriting, copyrightiting could be a sub mechanism of like um business fundamentals or like essential skills. Copyright can be a sub mechanism of that and then high value should be a sub mechanism of copyright like sub mechanism just refers to the mechanisms underneath what you've chosen to be your main mechanisms. So, um, also I used long- form copy as a sub mechanism to how to make big money and get paid a lot for copyrightiting because at the time everyone was selling emails and I didn't make 10K a month doing emails. I did some emails as part of my revenue, but a lot of my revenue came from sales pages. And so, I just simply educated people and told them, "Dude, you can write long form copy and make money, too. In fact, you might can make even more." And that gave people hope. They're like, "Oh, yeah. I've been writing emails. That's why I'm not making money." And they now have hope in copyrightiting. Again, super super powerful. Another example, um, when I was selling SMMA as his unique mechanisms, one of the biggest false beliefs around any agency offer is fulfillment. How do I actually provide these ads and these clients I'm promising? So he created the sub mechanism called the

5. Problem Chains

arbitrage economy to explain how fulfillment is easy because you don't have to do it. You don't have to learn the skills. You just hire someone overseas who's willing to do it for a super cheap price and you pocket the difference. Then he explains it logically. It's the same thing Airbnb does. It's the same thing uh I don't even know Uber and like Walmart and all them like they create the arbitrage. they create the marketplace and that's what you do and you get paid the same. So it's cool. You basically you address their false beliefs underneath the big um mechanism. So to to create this it's actually very simple but it takes a long time to to master. The first step is break down the result that your mechanism gets into a simple three to five step process. So through learning copyrightiting what are you trying to do? You're trying to make money online. That's the whole point. It's the reason you're learning copyrightiting. And so, how does copyrightiting help you do that? Well, what are the steps? First, you get good at the skill. Then, you get clients. And then, you get paid when you do good work. Pretty simple. Get good, get clients, get paid. Now, is that hard to do? Yes. But you want to break it down into a simple three-step process where it's simple to understand. It sounds easy. And then all you do is you make sure that each step is targeted to break a false belief. And so the what what can help you kind of find these steps is figuring out what the biggest false beliefs are in your audience. And so after working with a lot of people for free and being a copywriter myself, the biggest false beliefs are it takes too long to learn, it's too hard, outreach doesn't work or I have to send too many outreaches and I can't charge a lot of money for the copy that I'm writing. I can't make a ton. And so you use the same rules as applies to a normal mechanism for creating, you know, the sub mechanism because they're essentially all the same thing. So takes too long to learn. I created what? Hyperarning cycle. Outreach doesn't work. Takes too many to send. High value outreach. You get more responses by sending less. Beautiful. Um I can't charge a lot of money for my copy. Oh yeah, it's because you're selling short form copy. Instead, you should be selling long form. It's more valuable. It does more selling. Do you see how in literally three steps, we've now created three sub mechanisms that now make my offer so compelling? And I kind of did this by accident back in the day before I really dug in and understood this. Um, because honestly, like I just did this in my own journey and then just named it something cool. I didn't understand what I was doing. But the more and more I got into marketing and understanding like the marketing as a whole and like the just how the human mind works, I realized how powerful the things that I'd accidentally done were. In all my videos, I teach hyperlinking cycle, high value outreach, long form copy. And people were so sold on that idea that I I revived the whole idea of copyrightiting to them and they bought back in and they were ready and they got results because I gave them a program that actually worked. It's insane. Do you see how powerful this crap is? Like this is nuts. Um I would be screaming right now if I didn't lose my voice 20 minutes ago. This stuff is crazy. Now what I want to

5. Problem Chains

say is like sub mechanisms are not necessary in every single scenario. Okay? And I like to teach things that apply across every marketing ever, but this is one of those things where you're not always going to use it, but when you do, it is extremely powerful. So this is like a very important tool to have in your marketing toolbox. You might not always need it but when you do it's great to have very great and so um yeah just think about it. What are the results that I'm trying to give by my like mechanism break that down into a process and create sub mechanisms. So simple so powerful we'll go over examples in a second. All right problem chains. This is where things get exciting. If you weren't hyped yet, you should be now. Everything we just covered is so that we can get to this. So that we can address this big concept that will change your marketing forever. What you have to realize is that we solve big problems by doing what? By breaking them into smaller problems. That's how our brain works. And so you don't just stare at the wall saying, "I'm going to make money. I'm going to make money. I'm going to make money. I'm going to make money." You try to figure out what do I do to make money and you start making a to-do list of smaller problems. So this is why we create processes and to-do list. We break the big problem down into small ones until we can like achieve the small outputs to get the big output. This is also why first principles is so freaking important and why I teach it in everything I do. There's a reason that this course has been eight hours of like concepts and not necessarily just templates and frameworks. Yes, we've given some of those, but like if you break the big to-do list all the way down, all the way down to as small as you can get it, it comes back to what? First principles, the things that can't be broken down any further. So subconsciously, we form these problem chains in our head, and these act as like the usual subconscious to-do. So even if you're not aware of what your to-do list is, you have one subconsciously. And so in middle school, I didn't have a to-do list for getting a girlfriend, but I had this subconscious idea that like I need to lose weight. I need to get rid of my acne and I need to be friends with cooler people. Like it's I wasn't conscious of it but I did have these ideas and these are what we think will fulfill our core desire our core desires. So, um, our goal as a copyriter, hear me out here, is to prove how your unique mechanism, the specific problem that you solve is the final domino that sets off the chain reaction of that subconscious to-do list and solves the big problem. It resolves the core desire. If you do this right, they will have an overwhelming urge to buy. So if you show them why attractiveness is the problem like looking more proportionate, looking more attractive is the the problem that if they solved their whole life would be changed forever. They could get girls. They would be confident. They would have popular friends. They would be able to make money if everything resolved on attractiveness. And you showed them how the main thing, the main variable that changes how attractive you are in an instant is how well your t-shirt fits. Do you see why you're going to buy true classic TE's now? Like, it's so powerful.

5. Problem Chains

This is what you're doing is you're hacking someone's mind. You're understanding why do people do anything and just aligning what they're going to do with what you want them to do. Insane. So, how do we do that? Well, we do that by mapping out and iterating on what I call the problem chain. By mapping out the problem chain, you're going to see how you logically and emotionally lead your audience to the conclusion that they need what you sell. they have to get it. There's no other option. The problem chain starts at the core desire. So what we're doing is we're taking everything, every step from like their internal need, the very drivers that cause us to do everything. We're tapping into that and showing them all the way down the chain logically why their why your thing that you sell, the problem you solve is the key to all of it. That's when you unlock insane action. So you start with core desire, the internal problem they're trying to solve, the origin of their pain. So for me, it was, you know, I wanted a sexual companionship. I wanted a relationship. I wanted love. I wanted belonging. I wanted status. The status that came with having a girlfriend in middle school. That's what I wanted. the big problem. This is the obvious big problem that they're currently blaming their pain on. The thing that they think their pain is coming from. So for me, I didn't sit there and think, "Oh man, I just need more love, belonging, status, and and and sexual companionship." That wasn't all I was thinking. No, I was thinking, "I need a girlfriend." So the big problem is the obvious thing that they're currently blaming. You could also see this as like their current awareness level. What what's the big goal? What is the goal? The massive goal. Next, problem fractals. So, this is that subconscious to-do list, whether conscious or subconscious. This is the the to-do list they believe will lead them to achieve that big goal. And so, for me, it was like, you know, I got to be more attractive. I got to be cooler. I got to get rid of acne. I got to start losing some weight. Like those were the fractal of problems that came from the big goal. Getting a girlfriend, what do I do? I got to get jacked. I got to lose my acne. Got to get better hair. Like you start doing this to-do list. That's the problem fractals that fractal out from the big goal. Once again, we'll go over examples. These fractals lead all the way to your unique mechanism. So the problem and opportunity that your products and service solves. So let's say it fractals out and over here you know you want to be more attractive to get a girlfriend and under that you know you want to lose weight you want to get jacked you want to become you know get better hair you want to lose your acne under that you know get better hair you might realize that you know you need um so under the under the get better hair like what what are the problems you could solve on get better hair? Well, you could like make it you could change the color. You could make it you could help it grow out longer. You could get it cut differently, a different style. You could use product, you could use different shampoo to make it shine better. And so depending on what your product does is where you put in that mechanism. And so if you show them how, dude, the reason why your hair isn't attractive isn't because you got it cut wrong. It's

5. Problem Chains

because you don't know how to style it every single day when it's been cut. And you need this specific hair gel which uses um you know soft hold compound whatever the unique mechanism is to hold it in place without it looking like a turtle shell and your product just so happens to have that compound in it. It's like that's what I'm saying. This is how you do this. This is how you sell stuff. Then under that unique mechanism if you want you can have the sub mechanisms. So the unique solutions to the micro problems involved in your big mechanism. So these are questions that you can ask yourself to create problem chains. Like I said we'll go over examples in a second but like what are the core desires? See pain and confidence module. What is the obvious external problem that they currently brain they're playing on? Like what is their big goal? What is the unique mechanism that your product and service solves? So before you start the problem chain, you need to know what what are you selling because you're going to work backwards. You have the core desires and you have what you sell and then how do you tie that together? That's the whole plan. Then what is the logical chain of problems that someone would go through their to-do list to go from that external problem the big goal to needing your mechanism. So, as these things fractal out, the problems get more and more granular, more specific until they hit the thing that you sell. And what's cool is like the higher up the problem chain you go, the more you can charge because the more valuable it is because if you go up the problem chain and you solve that problem, it includes all the subpros. And so if I was to just sell um like a sales page course, it wouldn't be as valuable as me selling copy lead, which includes outreach systems, sales pages, first principles, thinking, mindset, coaching, community. Like, do you see what I'm saying? I could just sell my my unique mechanism. Oh goodness. My unique mechanism could just be, you know, sales pages. I can sell a sales page course. But because I go up the problem chain because I've solved more problems, I can charge more. So then what are the sub mechanisms under your unique mechanism? And then follow the steps above for that important reminders. Keep it simple. What makes the most logical sense to reach the conclusion? Also, it takes practice. The important part is that you can see why you buy things, why other people buy things, and you can start noticing it everywhere. So, we're going to go over a bunch of examples in a second, but I don't want you to leave this module and then be discouraged because you're instantly not a CMO after having all these breakthroughs. You It's going to take practice for you to use what I'm showing you and become a master at it. It takes time. The more time you spend thinking about problem chains, the more discoveries you will make, the better you'll sell stuff. So my goal here isn't to make you a master in one hour. It's to show you the concept that now that you know, now that you can see, you will become a master in 100 hours, thousand hours, whatever. And if you nail the problem chain, you'll have extreme clarity around your entire marketing effort. your whole funnel will be clear as soon as you nail this chain of problems because you

5. Problem Chains

know exactly what you have to prove in every stage of your funnel when you nail this. That being said, there is no perfect problem chain. There is no right answer. There are endless amount of angles and paths that you could take to sell the same thing. The main point here is that you find a path that is compelling to your audience, to their specific conditions. Um, it can be so easy to start overthinking this like crazy. Don't do that. You'll discover. You'll find the best problem chain for your offer over time. It won't be immediate. It will take time. But keep taking action. Keep iterating. Keep trying new problem chains and let your subconscious cook on it. It'll come. It'll come. So, how do we do that? Let's talk about mastering problem chains. Well, like usual, you know, for these concepts to translate into real money, your bank account, which they will over time if you continue to do them and practice them, you need to understand them and apply them. How do we do that? We do that using the high learning cycle. We put this at every module because this is what makes this module come into reality. Otherwise, it's just in your head. You feel good, but it doesn't make you money. This is what turns these things that I'm talking about into money for you. So if you don't do this then the chance of this turning into money for you is is extremely slim. Number one do we talked about you have to start doing first. This is the first step. So I want you to map out the problem chain for something you've bought recently. Get creative. Do this for any single thing you've bought. The more creative you get, the more you'll understand the first principles, which means the better you can go sell whatever it is you normally sell. Don't just stay an info product. Map out a chain for everything. Do this daily. Map out one problem chain a day as you continue to gain understanding of how this stuff works. I do this subconsciously all the time in my head. I'm like, "Oh, how did this, you know, why is this supplement store at this location? Oh, it's right beside the gym. How do they have demand?" Well, people from the gym have supplements. Why do people need supplements? Who's telling them about supplements? Do this daily. Think about it. And you can use the section in the co in the conditions deck. So I've added a section of questions to help you do this every single day. I've also added it to the mural template as well. Number two, learn rewatch this module and the previous ones. Right? So if you're going to learn someone teaching you this, this is what these modules are for. This is the learning material. Three, study these examples. So in a second, we're going to break down problem chains for other offers. So study what other people are doing. like break down their problem chains and then four iterate. So use what you learn from watching and studying to then improve the problem chains you create. So that being said, let's do a cycle together. Let's do it. Let's check out some problem chains. So here we are. This is the problem chain examples template. What I want you to do is I want you to make a copy of this um and you can take this chain and use it as like your template to create other chains. Now couple of disclaimers. This can be infinitely big. Like you can create a problem chain for someone's entire life. It could

5. Problem Chains

have like hundreds of these things all tied back to the core desire. But like I said, you just want to keep it simple. I can make this super big for every product you ever sell. And you could really get into like every other thing they could go down and every rabbit hole, but just try to keep it simple. The way we've got it laid out is we start with core desire which goes to the big problem, the big goal, which then goes to the problem fractals. So every single problem, this is like the the to-do list that tries to achieve the big goal. The grade out ones are the path that you didn't take, but they potentially could. So these are the things that I'm talking about where most people don't recognize that this is their competitors. But it is like if the goal is to make more money and I'm over here in the copyrighting niche, I'm not just competing against copyrighting. I'm competing against drop shipping agency against every other avenue someone could take to make money. And so you want to you want to write those out through the problem fractals. You end up at your unique mechanism. And then under that you have sub mechanisms. So let's just break it down real quick. Um, what I'm going to do is I'm I'm going to break down I'm just break I'm break down a few of these. We'll see how long my my voice can make it. But first example is a product that I sold, right? I want to show you guys a simple example of something that made me, you know, 90K from a low ticket product in the span of like five to six months. Insane. Most of that was made in the first three months. Um, I stopped selling it so I could work so I could focus on copy elite because it was copy elite creates more impact. It changes more lives. So easy easy choice there. But all this to say, I did this exact thing I'm about to show you and made a lot of money very easily with a small following. Like insane. This is how powerful it is. So the core desire you guys had was status, freedom, and purpose. What you wanted is you wanted money to give you that status, to give you financial freedom, location freedom, and to give you you wanted to do what you loved for a living. So purpose. The goal that you ascribe all that pain to is just make money online. This is like the obvious problem. You think all your pain is coming from not making money online. It's really coming from not having this. But the obvious external problem is make money online. So what did I do here? I well how do you make money online? You could learn skills or you could be like you could copy business models. These were the two paths that I kind of showed in my marketing. And so it goes from okay, you want these things. Well, you need to make money online. The best way to make money online is skills. So this you can see me like showing this logical path. Then I went through, okay, there's different skills you can use. We got persuasion, editing, graphic design, etc. There's a bunch, but I just put two on here for per the purpose of this. And I say, well, editing sucked. Graphic design didn't make much money. The best skills come from persuasion. So another little step in the chain. And then I went, well, you know, you can persuade people through doing sales, offline persuasion. You can go in person and talk to people in groups or onetoone, but you don't have

5. Problem Chains

scale. You can't persuade hundreds of you can't you can't persuade a million people at once in person. It's too hard. There's not enough like there's not enough scale there. But digital persuasion is different. You can do it from anywhere in the world. You can persuade tons of people at scale. It's easy. And then um inside digital persuasion which is the unique it's honestly just like copyrighting and copyrighting copyrighting is not a unique mechanism to you but copyrighting is a mechanism. It is a unique mechanism. It used to be unique to you. I'll show you an example of that in a second. Um, and so what I did was I just took the concept that you guys know is copyrighting, which is really just persuasion um, with written word on a screen and I turned it into digital persuasion. So it makes sense, right? It sounds intriguing. You kind of understand what it is, but not really. It had this hope to it. Um, I didn't really understand sub mechanisms, so I don't really have any. Um, I'll show you kind of how I did it, but these are not like clear, unique, tangible sub mechanisms. Um, but I did I did I did do something right by breaking the process down and making it seem easy and clear for them to get the result. So, I kind of accomplished what sub mechanisms do, but I didn't have the intrigue, the FOMO, and the curiosity behind having a good, you know, sub mechanism. So, this is cool and all, but like I want to show you how does this translate to a marketing message. So, what I did was my YouTube videos targeted these up here. So, I targeted what people were aware of and also I targeted like other kind of manifestations of them wanting status, freedom, purpose. So my old videos back then when I was selling DPS was like, you know, copy this strategy that made me 40k a month last month or something like that. So it's all about making money online. That's the current awareness level that I was targeting. From there, I told them about skills and told them if they wanted to learn the most valuable skill, you should check out my sales page. And so now we end up here. What does the sales page do? I'm going to break it down. So how anyone can master the art of digital persuasion to make 550k per month. Here we have the big goal immediately to make money online from anywhere in the world. This also plays into the core desire. So the freedom aspect I'm leaning in on that here. Then we go into the pain part. So I'm building pain by addressing the core desires, right? Why does it seem like everyone's making money online? What is that? status. Status I've tried everything. Nothing is working. Building the pain. What's the real secret the online gurus aren't telling me? I'm throwing rocks at enemies here. This is to bring awareness. It's It's not great. It's not a great I wrote this a year ago, but it's not bad. And a lot of people try to copy it. It does a good job of like bringing awareness to pain that's already there. So, it's just like, oh, remember all that pain you feel? Like, dude, think about it right now. Um, and what do I do? Immediately say, "I'm going to show you how to make money. I'm going show you how to make money." Now, this is where the problem chain gets fun. I trash I I say I immediately say, "Okay, how do you make money online? You got skills and business models." I immediately trash business

5. Problem Chains

models. So, now I'm cutting off this strand. So, they don't want to go down here. It's already caused them pain. And then I even trash the sub mechanisms under business models. So, check out how I did this. um agencies, growth operators, buying cheap courses, jumping on the latest marketing trend. Um instead, I said, "Frick all that." So I said, you know, I said, "This doesn't work. I'll show you what works, skills." I immediately say right there, um, I learned the most valuable skill. I talk about how all of these old skills and business models failed and I bring back all the pain. Is this a big scam? What if I make money online? And I immediately attached that pain by saying I discovered a skill. A skill changed it all. So what have I done here in their brain? So what I did was I you know I got rid of this say okay business models are bad. I trash on these business models and how it brought me pain. I'm building more pain. I tell them that skills is the route you want to take. But then I immediately say that you know I tried editing. I tried graphic design and these skills didn't work. So now you're now like I've built a lot of curiosity and they're like okay what when you burn every other option they're thinking what is the right option? Let's let's see how I did it here. The new skill that made me money. It ties right back. See how it's like so simple. It goes with the problem chain skill money core desire. I talk about um how somebody else was doing this and he had mastered this one skill. The skill was called digital persuasion. And then what I'm doing here is I I'm bashing the business models again. And I showed them how the real skill that I needed was persuasion. So I'm going down the persuasion route. So it's like skills now. Now we're at persuasion. But now I got to show them why offline persuasion sales isn't the option either. We got to cross that off. So um if you use persuasion with the power of the internet, you get more money, less time, less effort from learning one skill, digital persuasion. So instead of spending time, energy, and money in person, they're persuading them online. It all made sense. So here I'm just building insane curiosity around digital persuasion. Do you see how I cut off every other option in this problem chain and it led them straight to here? So now if you just read through this and you believe me, you you took me at my word. You're thinking, "This is it. I've got to learn this. I've got to learn this. Where else can you learn it though? You've never heard this word before. You have to learn this from me. You have to buy this thing or you don't learn digital persuasion because you don't know where else to get it from." That's the power of a unique mechanism. So let's see what I do here. here. I'm just building tons more. I'm like I'm solidifying in their brain that this path is the only path. So it's like digital persuasion skills make money. Digital persuasion skills make money. So I'm showing how dig digital persuasion was what made me all of this money. I'm showing them how other people have made money with this skill. And then what I do is I show them my product digital persuasion school. Notice how it is angled perfectly for exactly what they want. Digital persuasion. It's powerful, guys. Powerful. Um, in the purple, you can see me doing the sub mechanisms. So,

5. Problem Chains

like I said, I didn't do a great job with this, but I did do a good job of like breaking down the process and putting it in phases. So, where it seems simple. So, it's like phase one is addressing the biggest false belief, which is learning the skill quickly. Phase two is getting clients. People like, okay, well, I can learn the skill, but I don't know how to get clients. Then phase three is like, I can learn the skill, I can get clients, but I don't know how to provide good copy. So, by showing them all the phases, I'm knocking down the dominoes. And so, now this is what's happening on the problem chain. It's very simple. They're like, "Oh, I I can learn the skill pretty easily. I can do outreach. I He's going to give me a strategy that works. I can get clients. I can write valuable copy. I can do digital persuasion, which means I know persuasion, which means I learned a valuable skill, which means I can make money online. I'm buying this course. That's how this stuff works." Oh, I'm so pissed. My voice is gone or else I would be screaming right now. It's crazy when you actually see it all come together clearly, perfectly. There's no wonder why this sales page made so much money with very little traffic. It's just it's just good. Um, crazy. So, let's look at some other examples. You could do this for coffee so you can kind of see like, okay, I want status, maybe community going to a coffee shop. Um, so what you would do actually is like status and freedom would fall under the make money one. And then you'd have community over here, which would be under like I need to go around people. I'd be around people I like. And that would lead to you going to a coffee shop, which could lead into you getting coffee. So multiple problem chains come together for some different things. But you want to make money. So in order to make money, you know, you have to do work. You got to be productive. To do that, you need energy. You need focus. And so you could, you know, do a good diet, but that's hard. You could do other things which are like have bad side effects. Instead, you decide caffeine. Caffeine is the unique mechanism. It's not unique to us anymore because like you've heard about it all the time, but this is how you landed on coffee. At some point, like when you first were introduced to coffee, this is how you got here. You're super aware of it now, but like back then you weren't. You, you know, went through this. Pretty cool. Um, let's do one more. Let's go over, actually, we'll do two more. This is kind of how two chains can come together. So, shout out to Virgil. He helps me make these modules. Absolute freaking beast of a human being. But I wanted him to kind of do this live. So I was making sure that he was getting it so that you guys will get it. And here's how he decided to go through. He's like I was like, "How did you end up doing calisthenics?" Like you were obsessed with calisthenics. How did you get here? Why did you choose this? Because there's a reason you chose it. Do you know why? And so we built it out. He wanted love. He wanted sexual companionship which manifested into I need a girlfriend. He also wanted status. He wanted to be cool. So this is a completely different like thing here. I want to be cool. I need a girlfriend over here. He wanted to be attractive. Attractiveness leads to, you know, attractive faith. Like

5. Problem Chains

you could have a lot of these fractals over here, but we just did this to save time. So he went to I need an attractive body. To do that, I need to gain muscle. So we had a lot of different options. You have powerlifting. You do bodybuilding. You could do all kind of stuff. You could just literally just do steroids and not even work out. So how do you get to calisthenics? Well, we started thinking why what led you to calisthenics instead of these other ones? And he's like, "Oh, well, it was cuz I wanted to be cool." I was like, "Oh, that's different." So, he also wanted status. And so, by also wanting status and, you know, respect by he wanted art. He wanted to be cool. And so, to be cool, he thought, I need to have athletic skill. That makes me cool. As anybody thinks, like that is cool. Athletic skill is cool. It's a reason we watch sports. And so instead of doing all these other things, he decided to do calisthenics because it also builds muscle. And that is how he landed at this unique mechanism at at calisthenics. This is awesome stuff, guys. So cool. So freaking cool. Um, let's do Emans real quick. Right now, disclaimer here. This junk is kind of confusing. I'm gonna trash on a little bit, but like I Who am I to say, bro? He's made freaking a million times more money than I have. But I just want to show you guys kind of how how kind of vague it can get sometimes. So he has this sales page for digital launchpad and this is what it looks like. People want status, freedom, and purpose. Because of that, they want to make money online. Okay. He says, he's like, you can either he's like, okay, you know, a lot of people tried to copy what I did. Sales funnels, drop shipping, I tried them all. no avail until I made this small yet extremely effective change. So this change this first kind of belief in the chain the problem chain he talks about um he says the change you need is you're focusing on you're so what he does he says like you're doing things that keep you at the bottom. So, like he's saying you're not succeeding. This is why it's so confusing, bro. I for most of you, the reason you're not succeeding is not because of what you're not doing, but because of what you are doing. What the freak? Uh, I'd love to know what you guys were thinking on this one. I mean, I did a lot of sales, so maybe I'm just maybe I'm stupid and I'm not seeing it. But like, basically, his argument is like, okay, you could copy other people's success, which doesn't work. People tried to copy me. It doesn't work. So, what's the opposite of doing that? Well, it's to you got to become skilled. The person who creates the things that people are copying. He trashes on agencies and you know YouTube and short form strategies, all this. But he says, wait, this is not supposed to be red. Then he talks about well it's because you're focusing on what you aren't doing and instead he's like you should focus on what you are doing. This is the unique mechanism. I don't know. I mean it it it worked I guess. Um so it's like okay to make money online you got to become skilled. You can't just copy people. You got to forge your own path, but you got to focus on what you are doing instead of not doing. And then he kind of shows how that leads to the sub mechanisms which do make some sort of sense. He like immediately goes into okay I that's why I created

5. Problem Chains

digital launchpad is to show you what you are not doing. I I think I don't know. Then he just does some really good copy. Like he just cracks out a ton of copy which talks about how you this program gives you a lot of these juicy things that give you money. So I mean it's it's still kind of simple. It's like this thing will make you money, but the actual problem change is a little bit vague here. Um and then he goes into okay well you got to have a way like you got to have a way that works for you. So here we're going into kind of a whole different part of the sales message where he's saying like instead of having one way, you need multiple ways and that's why he's giving you three programs. And then the sub mechanisms are copyrightiting, organic ecom, and sales. Uh so yeah, that's pretty much it. Kind of confusing, but this is also why lacking relatability model is so important. Uh there's been so many times where my funnel is so bad. Like my funnel is terrible. I'll make a change and I'll like spaz and make some new VSSL and it doesn't even make sense in my marketing message and people still pay me thousands of dollars for this course. Uh why? Because you guys like me and you trust me. That's it. Simple as that. It's like when you have liking and trust, you can tell someone, "Hey, I can make you money." And guess what? They'll buy because they just believe you. Versus if you don't believe someone, they tell you, "Dude, I can make you some money." You're like, "I'm good." Even if they go through all this trouble to sell. So, because, you know, Iman has mastered the art of being a pretty likable person to the people he's targeting. Keep in mind, to the people he's targeting, he can just sell stuff and it can be kind of confusing and it can work. Either that or I'm completely missing something that I'm not getting here. And Luis, if you're the one who wrote this, please reach out to me and tell me how like what what I'm missing because I would love to learn. So, anyways, that's the problem, Shane, guys. Um, man. Okay, cool. So, what I want you to do is like take this layout and start making problem chains for the things you sell and the things you buy. You got to practice this. You're not going to get good at this by just staring at me looking at it. Like, you got to do this for yourself. Um, and you have to look at problem chains that that I've not solved for you. It's like doing math equations. If all you do is watch someone solve them, you're like, "Dude, I can totally do it." And then you go to solve it and you're like, "Oh, freak. I don't even know where to start." You got to start practicing. It takes time. Um, like I said, it takes practice, but once you learn how to create simple and compelling, straightforward problem chains, your marketing will become dangerously effective. I mean, like dangerous problem chains are everything. This is why like I I don't know if anyone's teaching this uh to this extent. So, congrats for being here. But um yeah, so quick reminder if you want me to crank out more modules um and even better ones than this one, let me know because honestly the wins that you guys were sending me from the last couple of course or the last modules that came out gave me the energy to do this one. So you getting this module is part because you're sharing your breakthroughs with me.

5. Problem Chains

Now don't lie. If it didn't help you, then don't tell me it helped you. But if it did, share share it in the course wins in the copy lead discord. It just gives me a lot of energy to know that the pain I go through losing the voice and hours of without sleeping trying to figure out these concepts is all worth it because it's helping you. It's changing your life. So, if it is doing that, let me know. And I love y'all and I'll see y'all in the next freaking module.
